

Our Service for your Development HPC Competence Center

High Performance Computing (HPC)

The HPC Competence Center of Fujitsu helps development departments with every aspect of simulation applications and all computationally intensive tasks.

Solutions for Research and Development (R&D)

Fujitsu offers overall solutions adapted to specific demands and needs in R&D. Researchers and developers belong to the most valuable company resources. Ideally, they would concentrate on their core R&D tasks and not on IT processes and infrastructures. At this point, we can help with our long-standing HPC expertise.

Reduction of Complexity

We contemplate your workplace with all its processes and make out of it a highly efficient tool for your R&D tasks. This will enable you to achieve the best and fastest results in your discipline. Fujitsu „ease of everything“ for researchers and developers means therefore 100% R&D performance in your daily tasks.

Perfect for Users

Global Fujitsu HPC Ready-to-Go solution platforms for your R&D network contain full service, benchmarks and model optimization service and support.

Our Portfolio

- Simulation Entry
- Consulting/Analysis/Reports
- System Design & Configuration
- Benchmarks
- Optimized Solutions
- Ready-to-Go Server Systems
- Installation & Integration

Our Services in Particular

Simulation Entry

You are already using CAD applications and currently searching for a way to enter the simulation area?

We can support you with our Simulation „Driving License“, concepts, feasibility studies, ROI evaluations, trainings and live tests on site.

Analysis/Reports

How to reduce simulation running times while using the existing licenses for a maximum benefit?

We provide you decision support:

- ROI
- TCO
- Performance Analysis

and identify your potential optimizations.

Configuration

High performance for R&D. We know the special requirements and we apply this knowledge in the configuration of your system.

Benchmark

We benchmark your simulation model and show you the performance of the future system before the final purchase. Hence, you can protect your invest and ensure that you will get an optimal system for your computation tasks.

Optimized Solution

Due to our cooperation with leading ISVs in connection with our long-standing experience in the simulation application's area, we are able to define optimized solutions for your application and your simulation model.

Ready-to-Go

One-stop solution, fully assembled and installed for you simulation application. Fully assembled in Augsburg and therewith „Made in Germany“. Ready for use after delivery: server hardware, interconnect, operating system, tools, service and support.

Integration

We deliver the systems and integrate them into your existing IT infrastructure.
