FUJITSU

Resolving the security challenge

In an ultra-connected business world where cyberattackers are smarter than ever, only a handful of organizations still think that a security breach is something that only happens to other companies. Yet many struggle with the challenge of putting the right safeguards in place to shield valuable assets – information and devices alike – without driving up workloads and worry for IT teams.

Fujitsu makes your business more secure without making your life more complicated. From hands-on advice on what to do and where to get started, to fully managed security services, you'll benefit from a full range of products and solutions including identity and access management, workplace protection and disk deletion.

The security wish list

What should security solutions ideally offer? As well as keeping valuable business information confidential, they should give users easy, seamless yet secure access to all the applications, IT services and information they need, from anywhere, at any time, on any device. Fujitsu offers integrated security packages to keep security both smart and simple.

Who needs passwords when you have PalmSecure™?

There's no need to remember passwords anymore. Fujitsu makes things easy with its unique biometric-authentication method, based on palm veins. With Fujitsu's PalmSecure™ technology, users can confirm their identity by scanning their palm vein pattern. Security no longer revolves around authenticating passwords; it's all about

authenticating people. The Fujitsu PalmSecure™ palm vein scanner is available on numerous Fujitsu client computing devices, from tablets and Mini PCs to workstations, as well as external devices.

Fact file: Palm vein technology

- Palm veins are unique, and stay the same for life
- Biometric pattern hidden under the skin
- Cannot be forged
- Highly hygienic due to no-contact operation
- Easy and intuitive to use

Precision of Authentication Methods Compared

Authentication Method	FAR* (%)	FRR* (%)
Face recognition	~ 1.3	~ 2.6
Voice recognition	~ 0.01	~ 0.3
Fingerprint	~ 0.001	~ 0.1
Finger vein	~ 0.0001	~ 0.01
Iris/retina	~ 0.0001	~ 0.01
Palm vein	< 0.00001*	~ 0.01

* FAR = False Acceptance Rate
* FRR = False Rejection Rate

Workplace Protect "family"

Instead of piecemeal security tools that lack coordination, Fujitsu offers Workplace Protect, an integrated Windows login solution that makes it easy to configure pre-boot authentication with single-sign-on to MS Windows and identity management.

- Local management of security settings for devices
- Easy user authentication with biometric devices or SmartCards
- Encrypted container: stores sensitive data in a virtual encrypted drive, thereby ensuring highest data protection
- Highly secure authentication by MFA (Multi-Factor Authentication)
- Password safe, manages login data to websites and stores login credentials
- AutoLock function to protect system when the user leaves the desk
- Optional remote configuration of security settings and devices via Workplace Manager: perfect for IT environments with over 50 workplaces
- Extendable to enterprise solution with Workplace Protect Active Directory

Erase Disk

When devices are decommissioned, it's vital to make certain confidential data on drives is fully and irrevocably deleted. EraseDisk wipes HDD and even SSD without any additional tools. Being part of the BIOS, it cannot be lost during the lifetime of the device.

- No separate installation required, as already implemented within the UEFI firmware of the device
- Saves millions of drives and protects the environment: drives can be re-used instead of being physically destroyed
- Excellent security: four deletion options with up to 35 deletion passes for HDD, and ATA Secure Erase for SSD
- Creates an auditable logfile
