

Security at your fingertips

Stay protected with PalmSecure™ ID Login.

For many companies, password management is a problem. It's costly and time consuming. A significant number of help desk calls are related to password resets. And the cost of dealing with these requests adds up over time.

But enterprises can't afford to let their guard down when it comes to cyber security. Cyber breaches are on the increase. It's now a question of when, not if, you'll be attacked.

PalmSecure™ ID Login provides a solution that is both more secure and easier to manage. After a brief enrolment process, you can log in at any Windows PC in an Active Directory (AD) environment using just the palm of your hand. All you need to do is hold your palm a few centimeters over the sensor. The sensor captures a near-infrared image of your unique vein pattern. This is then used in the matching process to give access to the system.

Workplace Protect AD

PalmSecure™ ID Login runs on Workplace Protect software. It requires Microsoft Active Directory as a foundation to ensure domain-wide login.

The software fetches the needed user data (including the biometric template) from AD and decrypts the biometric data at the local end-user device. Then it matches the data to the scanned template of the user's palm. Once the user has been verified, the software decrypts their password, giving them access.

Why should you use PalmSecure™ ID Login?

Highly secure

Everyone's vein pattern is unique. And the technology only works when it detects blood circulation.

Accurate

Palm vein technology has a false acceptance rate of 0.00001%. That's the lowest of all biometric devices. Palm veins are also thicker and easier to identify than other veins.

Hygienic and easy to use

All you need to do is hover your hand over the sensor. And because it's touch-free, it's completely hygienic.

Versatile

The technology has many different applications, both remotely and in the workplace. And it's used globally across many different sectors, from banking and government to retail and healthcare.

Cost-effective

Using palm vein technology means you can save money on costly password reset requests.

What are your options for PalmSecure™ ID Login?

When buying PalmSecure™ ID Login, you have three options:

- Our devices with built-in or external palm vein sensors and the Workplace Protect AD software.
- External palm vein sensors and the Workplace Protect AD software (if you already have our devices without integrated palm vein sensors).
- The Workplace Protect AD software licenses only (if you already have our devices with integrated palm vein sensors).
