## Chapter 3 - DDR4 System memory

B

There are 2 memory banks with 2 DIMM slots each.

**Single channel memory configuration allow maximum flexibility:**

Additional memory can be configured as single memory modules.

**Dual channel memory configurations for maximum performance:**

For optimum performance memory has to be configured in pairs of memory modules with identical size.

Max. 128GB unbuffered DDR4 RAM for UDIMMs with 32GB modules

**Note\*\*:** Memory is not included in the base unit and has to be configured separately, min 1x.

Memory module is not included in the base unit and has to be configured min 1x memory modules.

All memory module installing in one system must be identical. Any mix of different memory modules with different order code is not supported.
