FUJITSU Accessory PalmSecure OEM Sensor
Security Access Protection

Secure access to build upon

The Fujitsu PalmSecure OEM Sensor captures an individual’s palm image with a near-infrared light for highly secure logins. The sensor cube is designed specifically for integration in other products and solutions. It provides the opportunity to build custom secure access equipment based on Fujitsu PalmSecure technology.

Security
- Highly secure biometric solution through palm vein authentication. It provides a powerful combination of strong biometric authentication for log-in security, access management and data protection for enterprise environments.

Usability and Ergonomics
- PalmSecure is effortless to use. Simply hold the palm over the small infrared scanner and within a second the identity is verified. PalmSecure is completely hygienic because the system is contactless.

Designed for OEMs
- Provides an off the shelf biometric identification solution for original equipment manufacturers (OEMs) to integrate into their access systems.
