Fujitsu RemoteAccess Solution

Remote Access to Your Workstation Performance

Fujitsu's RemoteAccess solution offers secure remote access to your workstation, delivering an uncompromised user experience over standard IP local or wide area networks without sacrificing on graphics performance. Based on Teradici's PCoIP protocol, RemoteAccess is compatible with all operating systems, applications and graphics subsystems, via a connection to a standard IP network. This solution is designed to operate your workstation hardware and application software whilst handling your critical data securely in the datacenter.

Consolidation of workstations in the data center

- All workstations are operated and managed centrally. No heat and noise at the user's desk
- Flexible access to various resources / applications managed by broker SW
- Easy to implement high availability

Simplification of multi-display environments

- RemoteAccess alternatively to long DVI-cables or fiber cabling

Securing workstation hardware and data

- Excellent security with managed data access
- No physical access to workstation hardware
- E.g. in schools / universities
- Pooling of workstations, deploy and recover

Software-as-a-service

- Workstation application service offering
- Flexible license model (floating)

Fujitsu platform solutions

In addition to Fujitsu RemoteAccess, Fujitsu provides a range of platform solutions. They combine reliable Fujitsu products with the best in services, know-how and worldwide partnerships.

Dynamic Infrastructures

With the Fujitsu Dynamic Infrastructures approach, Fujitsu offers a full portfolio of IT products, solutions and services, ranging from clients to datacenter solutions, Managed Infrastructure and Infrastructure-as-a-Service. How much you benefit from Fujitsu technologies and services depends on the level of cooperation you choose. This takes IT flexibility and efficiency to the next level.
