FUJITSU Storage ETERNUS AF250 All-Flash Array

Transform with Flash!

ETERNUS AF Storage

FUJITSU Storage ETERNUS AF is an incredibly fast and flexible all-flash storage system for the next generation data center. At an affordable price point, it makes flash the new normal for all tier-1 applications in enterprise IT. Response times are ultra-low – in fact, they set performance records. The ETERNUS AF is also built to be smart, with easily-configurable automated quality of service to ensure each app gets the performance it needs, plus flexible deduplication and compression that can be turned on when required – and off when not. It keeps data safe as houses, with full-fledged DR with mirroring and automated transparent failover.

ETERNUS AF250

The ETERNUS AF250 is the ideal choice for application scenarios with demanding data and performance requirements. The system delivers impressive IOPS performance with lowest latency even at full load. Thus it offers a solution that resolves all performance issues in critical applications – such as real-time business analytics or VDI environments – without requiring any complicated tuning. It also fits best as general purpose storage for all Tier-1 applications in small and mid-sized companies.
