FUJITSU Storage ETERNUS DX8700 S3 Disk System

Enterprise Storage with leading scalability in capacity and performance

ETERNUS DX - Business-centric Storage

Combining leading performance architecture with automated quality of service management the Fujitsu Storage ETERNUS DX series aligns storage resources with business priorities, thus enabling higher system utilization and delivering increased system consolidation capabilities and a faster ROI. Unified scalable entry-level and midrange systems, a seamless family concept enabling system upgrades and ETERNUS SF, the unified management suite across the product line, reduce operational and migration costs. ETERNUS SF provides enterprise-class functionalities in the entry and midrange class and allows flexible disaster recovery and business continuity concepts for the different model sizes, thus decreasing investment costs

ETERNUS DX8700 S3

The ETERNUS DX8700 S3 disk storage system is purpose-built for large enterprises and ideal for the data management of business-critical core applications and the consolidation of large-scale data centers. ETERNUS DX8700 S3 provides non-disruptive capacity upgrades with up to 1536 disk drives, just by adding disks or complete drive enclosures. Performance in the million IOPS range is provided by configurations based on 2 to 8 controllers and a maximum of 128 front-end ports for host connectivity. For simultaneous connection to different network types, FC, FCoE and iSCSI host interfaces can operate in mixed configurations. Tiered storage optimization using a range of SAS, Nearline SAS and SSD drive options lowers the overall total cost of storage.
The challenges of data exposure protection are addressed by self-encrypting drives (SED). Flexible and automated management across different quality of service profiles, using different drive types for each application scenario, ensures efficient assignment of system resources matched to the performance priorities of different applications.
Highest availability and seamless business continuity is guaranteed by redundant interconnections to the storage array and internal redundant components and completed by transparent failover which ensures uninterrupted operation in case of an outage.
