FUJITSU Server PRIMEQUEST 3800B2

Superior performance and reliability for business-critical workloads with optimized economics

Combining the power of Intel® Xeon® Processor Scalable Family, the standard specifications of Microsoft Windows and Linux operating systems and the wealth of market solutions with innovative RAS features for highest availability and business continuity, FUJITSU Server PRIMEQUEST systems provide new levels of operational efficiency for business and mission critical computing with truly open standards and deliver highest performance. FUJITSU Server PRIMEQUEST systems combine the efficiency of an x86-architecture with the reliability levels rivaling that of a UNIX/mainframe architecture. This makes it ideal for processing Big Data, In-memory solutions such as SAP HANA® and Business Intelligence applications, while preserving all the RAS qualities for maximum uptime.

PRIMEQUEST 3800B2

The FUJITSU Server PRIMEQUEST 3800B2 is the prime system for business-critical computing that offers superior performance and reliability with optimized economics. This 8-socket rack server combines the flexibility and economic benefits of x86 industry standard systems with business-critical uptime features. Featuring the latest Intel® Xeon® Processor Scalable Family (8200) with up to 28 cores per processor for a total of 224 cores, this server delivers superior compute performance leading to efficient business results. With high memory capacity of up to 24TB (DDR4 only) or 36TB with Intel® Optane™ DC Persistent Memory, the system can support large amounts of data for in-memory databases such as SAP HANA® and real-time data analytics, thereby making it the right choice for the most complex business-critical workloads in big data processing environments. The large memory capacity also leaves enough headroom for high-density, high-capability

virtualization. The superior compute and memory performance in combination with 16 PCIe 3.0 expansion options (Including PHP slots.) offers performance and scalability with no compromise for the most demanding workloads. With a compact 5U chassis design, the PRIMEQUEST 3800B2 system is light weight and offers superior performance in an economic, space-saving footprint. All these features when combined with the PRIMEQUEST 3800B2's advanced RAS features that prevent errors in advance, makes this 8-socket 5U rack server the right choice for demanding corporate databases, in-memory solutions and business-critical applications found in SAP environments or big data processing.

Features & Benefits

Main Features	Benefits
<p>Scalable platform for transaction demanding workloads and consolidation</p> <ul style="list-style-type: none"> 8x Intel® Xeon® Platinum processors with up to 224 cores. Huge memory capacity of 24TB (DDR4 only) or 36TB with Intel® Optane™ DC Persistent Memory. 16 PCIe 3.0 expansion options (Including PHP slots). Compact 5U chassis. Economic scaling from 2 to 8 sockets. <p>Smart architecture with advanced RAS for Business Critical Workloads</p> <ul style="list-style-type: none"> 'Glue-less' design, no external UPI cables. Dual power feed option for two redundant phases. CPU detects data errors and replay execution of instructions. Advanced memory protection, intra-socket mirroring and address range mirroring. System health check and failure prevention (MCA Gen.2). Online firmware update helps reduce downtime for system maintenance. <p>Cost efficiency for your data center</p> <ul style="list-style-type: none"> Simplified server architecture with a compact 5U chassis. Simplified power management with different pre-defined power profiles. The iRMC S5 delivers optimal administration across the lifecycle. 	<ul style="list-style-type: none"> Unprecedented performance and memory capacity for demanding corporate databases, in-memory solutions and business-critical applications. Fast memory and I/O throughput ensured. Cost-efficient 5U chassis packs superior performance in an economic, space-saving footprint. This system is designed to enable simple scale-up as required components are "inside" the system thanks to the "glue-less" system design. No external UltraPath Interconnect (UPI) cables ensure a high level of serviceability. Improved system resilience, system can continue its operations even if two PSUs fail. Advanced RAS features in CPUs and memories have been built in to enable advanced actions for error circumvention, assisted by the enterprise x86 operating systems to increase the system availability. No need to stop the system even during a system update. Reduced data center hardware costs and electricity bills. Simplified and comprehensive power management that results with the high efficient power supplies in significant savings. The server supports the Fujitsu iRMC S5, to enhance admin productivity and ease server usage across the entire lifecycle.
