Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. Fujitsu PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

**PRIMERGY RX4770 M7**
The Fujitsu PRIMERGY RX4770 M7 server is a quad-socket x86 system providing superior levels of scalability in a 3U chassis. The PRIMERGY RX4770 M7 accelerates business insights and delivers unprecedented performance for in-memory database, AI solutions, Cloud services and data analytics. Powered by the 4th generation Intel® Xeon® Scalable Processors with up to 60 cores/ CPU and large memory capacity provided by 64 DIMM slots in total supporting 16 TB memory, the server delivers outstanding results for demanding applications. The latest DDR5 DIMM modules with memory speeds up to 4,800 MT/s provide fast and large memory capacity. The RX4770 M7 stands for versatile resources that help to cope with changing business demands. Up 24x 2.5”SAS/ SATA/NVMe options provide enormous capacity to handle storage demanding applications. The possibility of using up to two double width, full-length GPU cards helps to accelerate data-intensive analytics and 10 PCI-Express 5.0 slots increase bandwidth and provides sufficient expandability for even faster business insights. Even as your workloads and administration tasks become more complex, the Fujitsu Infrastructure Manager (ISM) as well as the integrated Remote Management Controller (iRMC S6) simplify management of your server and the IT infrastructure so you can focus on your business objectives. ISM enables organizations to have centralized control over the infrastructure which includes servers, storage and networking using a single user interface. Further enhanced integrated security features and proven reliability help to ensure maximum uptime in your enterprise data center. The PRIMERGY RX4770 M7 is the ideal server for business-critical workloads, AI, large-scale virtualization, back-end and in-memory databases such as SAP S/4HANA and general data-intensive applications where the right performance, reliability and efficiency are essential.

**Notes**

- **Compatibility**
  If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A final statement and/or commitment on the compatibility of such deviating or other system components and applications can only be provided after a corresponding verification through a dedicated compatibility testing.

- **Continuity management**
  The product may in connection with and depending on the specific configuration include elements to support time- and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a standalone product feature. If and to the extent the product is to be used in such business-critical environments, it is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster), redundancies, and operational conditions as required to ensure such high availability or failsafe performance.

- **Security**
  The properties of the product provide a baseline for product security and therefore end-customer IT security. However, these properties are not sufficient on their own to protect the product from all existing threats, such as intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use the configuration options as available for the respective product. During operation, the IT security of this product is within the responsibility of the respective administrator/end-user of the product. Please note, that Fujitsu as a manufacturer does not make any policy prescriptions or advocacy statements regarding IT security best practices and/or general product operation.
