Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

**PRIMERGY RX8770 M7**

PRIMERGY RX8770 M7 is the latest High-end of Fujitsu x86 PRIMERGY portfolio. A powerful 4 or 8-socket rack server, especially designed for back-end in memory application databases like SAP S/4HANA. To scale-up corporate workloads and high-performance database and In-memory database processing. The server constitutes a highly scalable, 4th generation Intel Xeon Scalable Family processor-based server that significantly extends the economic advantages of x86 industry standard scale-up solutions. It scales the usage patterns for in-memory solutions like SAP S/4HANA to highest performance levels, starting with 4-socket up to far higher 8-socket x86 server class. PRIMERGY RX8770 M7 provides extreme scalability as regards the 8-socket processing performance of the Platinum processor level 84xxH (480 cores), memory expandability with 128 DIMM slots (max. 32 TB DDR5 RDIMM) with up to 4800 MT/s, 24 x PCIe 5.0 slots and up to 24x 2.5-inch SATA/SAS/PCIe SSD storage devices. It scales up linearly with I/O, memory, and CPUs inside the 6U rack system unit without the need for infrastructure changes. Very large corporate databases and heavy load transactional processing applications, where response time and throughput is paramount, will benefit best from the platform’s efficient scalability and high I/O bandwidth. Likewise, corporate SAP S/4HANA, Decision Support services and Business Intelligence solutions, where performance for time-to-results constitutes the business-critical value, will profit from its enormous processing power. The PRIMERGY RX8770 M7 provides all the business-critical attributes for a constantly reliable IT operation at latest high-performance levels.
