Fujitsu PRIMERGY CX2560 M5 Multi-Node Server

Balanced efficiency and expandability for demanding cloud and virtualization scenarios

Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. Fujitsu Server PRIMERGY systems deliver workload-optimized x86 industry standard servers for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers for remote and branch offices, versatile rack-mount servers and density-optimized multi-node servers. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

PRIMERGY CX2560 M5
The Fujitsu Server PRIMERGY CX2560 M5 delivers the latest generation of powerful processors, large memory capacity and scalable I/O capability that meet virtualization, server consolidation or enterprise application needs. It’s a flexible, two-socket half-height/width server node for the PRIMERGY CX400 M4 chassis powered by Intel® Xeon® Scalable processors as well as new 2nd generation processors of the Intel® Xeon® Scalable Family (CLX-R) delivering industry-leading frequencies. Each CX2560 M5 within the enclosure supports up to 2TB of DDR4 memory, making it a perfect candidate for dense virtualization environments. Furthermore, it is possible to use new Intel® Optane™ DC Persistent Memory and to mix them with standard DDR4 modules, resulting in a total capacity of 7,680 GB per server. Unlike traditional DRAM, the new persistent memory modules will offer the unprecedented combination of high-capacity, affordability and persistence. Servers equipped with this new class of memory will be able to adapt and optimize their workloads by moving and maintaining larger amounts of data closer to the processor and minimizing the higher latency of fetching data from system storage. The CX2560 M5 storage options include six 2.5-inch SAS/SATA HDD/SSD drives per node, with additional option of using two M.2 drives or a dual microSD card directly in the system as an internal boot device. The PRIMERGY CX400 M4 chassis supports up to four CX2560 M5 servers.

<td>New efficiency for performance bottlenecks</td>
<td>Ready for the future and data growth scenarios with the performance of two processors – marking the standard of tomorrow with an increase in computing power. New SKUs of the 2nd generation Intel® Xeon® Scalable processors deliver additional customer value with increased performance and industry leading frequency (up to 3.9 GHz base and up to 44% more processor cache) for the most demanding workloads.</td>
</tr>
<tr>
<td>Wide choice of different types of Intel® Xeon® Scalable processors as well as new 2nd generation Intel® Xeon® Scalable processors. Each processor offers up to 28 cores and up to 56 threads enabling a notably higher performance and efficiency.</td>
