PRIMERGY RX2450 M1 Rack Server

Powerful server that serves your services

Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business - large enterprise with multiple sites, or a small or medium-sized company with limited space and budget - with the right choice of server, your IT can become the business enabler you have always wanted it to be.

PRIMERGY RX2450 M1
The Fujitsu PRIMERGY Server RX2450 M1 is a dual-socket 2U rack server that delivers powerful performance together with flexible configuration options. Powered by the 2nd and 3rd Gen AMD EPYC™ Processors, the server system is ideal for traditional and emerging workloads such as virtualized and cloud computing environments, all kinds of service providers, HPC and data-intensive workloads. The PRIMERGY RX2450 M1 can be equipped with two AMD EPYC™ CPU’s featuring up to 64 cores each. Along with enhanced DDR4 memory technology supporting 3,200 MT/s, the server features sufficient memory capacity provided by 32 DIMM slots in total supporting 4TB of memory.

In particular the instructions per clock increase of the latest AMD EPYC™ processors compared to the previous generation as well as the amount of DIMM slots provide great VM, container and application density. The design of the server offers balanced expandability with up to 24 hot-swap 2.5” storage drives as well as up to four PCIe 4.0 expansion slots. In order not to waste the disk capacity in the front of the chassis, the system also offers other advanced features such as SSD SATA M.2 drives for efficient boot requirements. PCIe 4.0 delivers double the I/O performance over PCIe 3.0, provides 128 PCIe lanes and satisfies voracious needs for east-west bandwidth. Moreover, the server can be equipped with different kinds of NVIDIA GPU cards. The PRIMERGY RX2450 M1 comes with two redundant 1600W high-efficiency (Platinum Level) power supply units and in total four fan modules with speed control providing efficient system cooling.
### Features & Benefits

<tbody>
<tr>
<td><strong>SECURE, HIGH PERFORMANCE COMPUTING</strong></td>
<td>The versatile PRIMERGY RX2450 M1 server with AMD EPYC™ 7002/7003 processors shortens time to value for IT organizations running demanding workloads.</td>
</tr>
<tr>
<td>■ With up to 128 cores (per 2-socket configuration), 32 DIMMs, 4 TB memory capacity, as well as support for up to 24 storage drives, the PRIMERGY RX2450 M1 server delivers low cost virtual machines (VMs) with unprecedented security.</td>
<td></td>
</tr>
<tr>
<td><strong>EXPANDABILITY AND DENSITY</strong></td>
<td>Agile and data-driven companies modern platforms that scale easily and are optimized for application performance. The PRIMERGY RX2450 M1 is built upon a scalable system architecture and provides choice and flexibility to meet performance demands.</td>
</tr>
<tr>
<td>■ The server system offers the possibility of using up to 24x 2.5-inch storage drives. There is also the option of expanding the server using a total of 4x PCIe Gen 4 slots. The server can be equipped with different kinds of NVIDIA GPU cards.</td>
<td>As you scale your infrastructure, scale your profitability with FUJITSU Software Infrastructure Manager (ISM). ISM enables organizations to have centralized control over the entire data center, which includes servers, storage, networking, cloud management software as well as power and cooling using a single user interface.</td>
</tr>
<tr>
<td><strong>AGILE INFRASTRUCTURE MANAGEMENT</strong></td>
<td>Designed with security in mind, AMD EPYC™ 7003 series processors help protect your CPU, applications, and data. And with the range of features you need to power your business, you can adapt your IT infrastructure to match workload challenges you face today and into the future.</td>
</tr>
<tr>
<td>■ Infrastructure Manager (ISM) provides seamless, holistic management ensuring that IT infrastructures retain the dynamic flexibility required to support ever-changing business demands. Two versions of ISM are available. ISM Advanced is a powerful, fully featured version offering comprehensive infrastructure management capabilities such as support for multiple hardware configurations, physical and virtual network connection indicators and firmware baseline updates. A free entry-level version, ISM Essential, provides essential monitoring and firmware update of all supported devices, including servers, storage and network switches.</td>
<td></td>
</tr>
<tr>
<td><strong>SECURITY</strong></td>
<td></td>
</tr>
<tr>
<td>■ PRIMERGY RX2450 M1 equipped with AMD EPYC™ processors boast a set of advanced security features, called AMD Infinity Guard, which includes the AMD secure processor, Secure Memory Encryption (SME), and Secure Encrypted Virtualization (SEV). All of these features help minimize potential attack surfaces as software is booted and executed and processes your critical data.</td>

### Mainboard

| Mainboard type | MBD-H12DSU-IN-P |
| Chipset | System on Chip (SoC) |
| Processor quantity and type | 2 x AMD EPYC™ 7002 series processor / AMD EPYC™ 7003 series processor |
| Processor notes | Two CPUs must be configured, no mix of different CPU types |
| Memory slots | 32 (16 DIMMs per CPU) |
| Memory slot type | DIMM (DDR4) ECC |
| Memory capacity (min. - max.) | 64 GB - 4 TB |
| Memory protection | Advanced ECC |

### Interfaces

| USB 3.x ports | 2 x USB 3.0 (2x rear) |
| Graphics (15-pin) | 1 x VGA (1x rear) |
| Serial 1 (9-pin) | 1 x Serial (1x rear) |
| Management LAN (RJ45) | 1x 1GbE (1x rear) |

### Onboard or integrated Controller

| RAID controller | All hardware storage controller options are described under Components |
| SATA Controller | SATA controller integrated on the system board; up to twenty SATA HDDs/SSDs can be connected to the controller. |
| LAN Controller | 2x 1GbE (Use AOC LAN card) |
| Remote management controller | BMC with 256 MB DDR4-800 SRAM for video, IPMI 2.0 compatible |

### Slots

| PCI-Express 4.0 x16 | 4 x Full height 3x PCIe Gen4 x16 for double-wide GPU, 1x PCIe Gen4 x16 |

### Drive bays (Base unit specific)

| Storage drive bays | Up to 24: 16x 2.5-inch SATA only + 4x 2.5-inch SAS/SATA + 4x 2.5-inch NVMe (PCIe Gen3) |
| Storage drive bay configuration | There are 4 kinds of storage drive bay configurations. |

- PYR2451RAT: 16xOnboard SATA, 4xOnboard PCIeSSD
- PYR2451RBT: 12xOnboard SATA, 4xSATA under Raid/HBA, 4xSATA/ SAS under Raid/HBA, 4xOnboard PCIeSSD
  * 1pcs CP503i or 1pcs EP520i controller are required. |
- PYR2451RGT: 12xSATA under Raid/HBA, 4xSATA/ SAS under Raid/HBA, 4xOnboard PCIeSSD
  * 2pcs CP503i or 2pcs EP520i or 1pcs EP540i or 1pcs EP 580i controller are required. |
- PYR2451RHT: 16xSATA under Raid/HBA, 4xSATA/SAS under Raid/HBA, 4xOnboard PCIeSSD
  * 2pcs EP540i or 2pcs EP 580i controller are required. |

Notes

Compatibility
If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A final statement and/or commitment on the compatibility of such deviating or other system components and applications can only be provided after a corresponding verification through a dedicated compatibility testing.

Continuity management
The product may in connection with and depending on the specific configuration include elements to support time- and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a standalone product feature. If and to the extent the product is to be used in such business-critical environments, it is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster), redundancies, and operational conditions as required to ensure such high availability or failsafe performance.

Security
The properties of the product provide a baseline for product security and therefore end-customer IT security. However, these properties are not sufficient on their own to protect the product from all existing threats, such as intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use the configuration options as available for the respective product. During operation, the IT security of this product is within the responsibility of the respective administrator/end-user of the product. Please note, that Fujitsu as a manufacturer does not make any policy prescriptions or advocacy statements regarding IT security best practices and/or general product operation.
