Powerful server that serves your performance and security requirements

Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

PRIMERGY RX2450 M2
The PRIMERGY RX2450 M2 is a dual-socket 2U rack server that delivers high core count performance combined with flexible configuration options. Powered by the 4th Gen AMD EPYC™ processors, the server system is ideal for traditional and emerging workloads such as generative AI, LLM deep learning, virtualized and cloud computing environments, HPC and other data-intensive workloads. The PRIMERGY RX2450 M2 can be equipped with two AMD EPYC™ CPUs featuring up to 128 cores each. PRIMERGY RX2450 M2 provides a Platform Firmware Resilience (PFR) feature to help protect against platform firmware attacks and is designed to detect and correct them before they can compromise or disable the machine. Along with enhanced DDR5 memory technology supporting 4,800 MT/s, the server features maximum memory capacity provided by 24 DIMM slots in total supporting 6TB of memory. The instructions per clock increase of the latest AMD EPYC™ processors compared to the previous generation as well as the capacity of DIMM modules provide great Gen AI, VM, container and application density. The design of the server offers balanced expandability with up to 24 (plus 6 at rear) hot-swap 2.5" storage devices as well as up to eight PCIe 5.0 expansion slots. In order not to waste the disk capacity in the front of the chassis, the system also offers other advanced features such as SSD SATA M.2 devices for efficient boot requirements. PCIe 5.0 delivers double the I/O performance over PCIe 4.0, provides 128 PCIe lanes and satisfies voracious needs for east-west bandwidth. Moreover, the server can be equipped with different kinds of NVIDIA GPU cards like H100. The PRIMERGY RX2450 M2 comes with two redundant 900 - 2400W high-efficiency (Titanium Level) power supply units and in total six fan modules with speed control providing efficient system cooling.

### Notes

#### Compatibility

If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A final statement and/or commitment on the compatibility of such deviating or other system components and applications can only be provided after a corresponding verification through a dedicated compatibility testing.
### Notes

**Continuity management**

The product may in connection with and depending on the specific configuration include elements to support time-
and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a
standalone product feature. If and to the extent the product is to be used in such business-critical environments, it
is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster),
redundancies, and operational conditions as required to ensure such high availability or failsafe performance.

**Security**

The properties of the product provide a baseline for product security and therefore end-customer IT security.
However, these properties are not sufficient on their own to protect the product from all existing threats, such as
intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use
the configuration options as available for the respective product. During operation, the IT security of this product
is within the responsibility of the respective administrator/end-user of the product. Please note, that Fujitsu as a
manufacturer does not make any policy prescriptions or advocacy statements regarding IT security best practices
and/or general product operation.
