Fujitsu Server PRIMERGY RX2530 M6 Rack Server

Maximum productivity in a 1U housing

Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. Fujitsu Server PRIMERGY systems deliver workload-optimized x86 industry standard servers for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

PRIMERGY RX2530 M6
The Fujitsu Server PRIMERGY RX2530 M6 is a dual-socket x86 system providing an ideal mix of performance, cost and scalability for most data centers in a dense 1U chassis. The PRIMERGY RX2530 M6 is ideal for virtualization, scale-out scenarios, databases as well as HPC infrastructures. It supports the latest 3rd Generation Intel® Xeon® Scalable Processors with up to 40 cores in a standard socket, resulting in a performance improvement of up to 40% compared to the previous generation processors. The server provides an incredibly large amount of memory capacity provided by 32 DIMM slots (10 TB) delivering excellent results for even the most demanding applications. Beside the DDR4 modules with memory speeds of up to 3,200 MT/s, it is also possible to combine them with the Intel® Optane™ persistent memory 200 series that delivers a unique combination of affordable large capacity and support for data persistence. Get more than enough storage flexibility with up to 4x 3.5" SAS/SATA, up to 10x 2.5" SAS/SATA/NVMe, or the option to use up to 32x EDSFF (Enterprise & Data center Storage Form Factor) storage drives. In addition, two further 2.5" storage drives are available as an option on the rear of the chassis. The PRIMERGY RX2530 M6 supports the new PCIe 4.0 interface. A total of four of these interfaces are available. It also provides two flexible DynamicLoM adapters via OCP V3. Integrated security and proven reliability helps to ensure maximum uptime in enterprise data centers. In addition to some new hardware security functions such as Platform Firmware Resilience (PFR), the server also offers an optionally lockable front bezel to avoid unauthorized physical access directly in the data center. All new available security features should help to secure sensitive workloads and enable new opportunities to unleash the power of data. Even as your workloads and administration tasks become more complex, the Fujitsu Infrastructure Manager (ISM) as well as the integrated Remote Management Controller (iRMC S5) simplifies management of your server and the whole IT infrastructure so you can focus on your business objectives. ISM enables organizations to have centralized control over the entire data center, including servers, storage, networking as well as cloud management software using a single user interface.
