The data center standard without compromise

Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. Fujitsu PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

**PRIMERGY RX2540 M6**

The Fujitsu Server PRIMERGY RX2540 M6 is a dual-socket x86 system that delivers the latest in performance, usability, and expandability in a compact 2U chassis. The PRIMERGY RX2540 M6 forms the standard in every modern data center and enables the running of nearly every workload from the most basic to business-critical applications. As one of the crucial foundations of performance, it can be equipped with the latest 3rd Generation Intel® Xeon® Scalable Processors with up to 40 cores, resulting in performance improvements of up to 40% compared to the previous generation processors. Along with enhanced DDR4 memory technology supporting 3,200 MT/s, the server features an incredibly large amount of memory capacity provided by 32 DIMM slots in total supporting 8TB memory with standard DDR4 modules, or up to 12 TB memory in combination with Intel® Optane™ persistent memory 200 series. The modular design of the server offers excellent expandability with up to 12x 3.5” SAS/SATA, up to 24x 2.5” SAS/SATA/NVMe, or the option to use up 64x EDSFF (Enterprise & Data center Storage Form Factor) storage drives. In addition, six further 2.5” storage drives are available as an option on the rear of the chassis. Additional expansion options are provided by up to 8 PCIe Gen 4 slots. Moreover the server can be equipped with up to six NVIDIA GPU cards. Thus the server also provides optimized performance for AI and HPC workloads. A variety of DynamicLoM options via OCP V3 complete the overall picture. The server system also includes new security technologies to help secure sensitive workloads and enable new opportunities to unleash the power of data. Sophisticated adversaries may attempt to compromise or disable the platform’s firmware to intercept data or take down the server. RX2540 M6 introduces Platform Firmware Resilience (PFR) to help protect against platform firmware attacks, designed to detect and correct them before they can compromise or disable the machine. Even as your workloads and administration tasks become more complex, the Fujitsu Infrastructure Manager (ISM), as well as the integrated Remote Management Controller (iRMC S5), simplifies management of your server and the whole IT infrastructure so you can focus on your business objectives. ISM enables organizations to have centralized control over the entire data center, including servers, storage, networking as well as cloud management software using a single user interface. The PRIMERGY RX2540 M6 is the ideal server for business-critical workloads such as collaboration, business processing, graphics rendering or in-memory databases where the right performance, expandability and efficiency are essential.

### Notes

#### Compatibility
If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A final statement and/or commitment on the compatibility of such deviating or other system components and applications can only be provided after a corresponding verification through a dedicated compatibility testing.

#### Continuity management
The product may in connection with and depending on the specific configuration include elements to support time- and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a standalone product feature. If and to the extent the product is to be used in such business-critical environments, it is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster), redundancies, and operational conditions as required to ensure such high availability or failsafe performance.

#### Security
The properties of the product provide a baseline for product security and therefore end-customer IT security. However, these properties are not sufficient on their own to protect the product from all existing threats, such as intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use the configuration options as available for the respective product. During operation, the IT security of this product is within the responsibility of the respective administrator/end-user of the product. Please note, that Fujitsu as a manufacturer does not make any policy prescriptions or advocacy statements regarding IT security best practices and/or general product operation.
