Ultra-compact advanced technology server to accelerate your business

PRIMERGY portfolio offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. PRIMERGY server systems deliver workload-optimized x86 industry standard servers for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers for remote and branch offices, versatile rack-mount servers and density-optimized multi-node servers. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

PRIMERGY TX1320 M5
The unique ultra-compact Fujitsu PRIMERGY Server TX1320 M5 has advanced technology ideal for most industry verticals, small and medium-sized enterprises (SME), space-constrained environments, retail premises or branch offices. The performance-oriented yet cost-effective mono-socket design supports the latest Intel® Xeon® E-2300 product family processors, an affordable Pentium® processor option plus up to 128 GB RAM at 3,200 MT/s to boost performance for appropriately sized standard business workloads, including virtualized ones (such as: file/print, email, ERP/CRM, messaging, centralized data storage) and industry specific applications. Institutions with special legal requirements such as medical, governmental, legal, or financial offices can benefit from the server's secure and robust storage and transmission features. These include up to eight high quality 2.5-inch storage devices (including up to four ultra-fast PCIe SSDs for demanding applications), powerful RAID controllers, graphics and networking options enabled by 4 PCIe expansion slots (4.0/3.0) together with versatile and affordable backup plus TPM 2.0 capability. High efficiency (96%), 500W redundant power supplies enhance reliability and protect customer investment. This ultra-compact, silent server with an optional dust protection kit and Advanced Thermal Design Technology is designed for deployment flexibility – it can be deployed in offices, on rack shelves, industrial areas and even on desks at temperatures from 5 °C to 45 °C. New generation technologies include M.2 modules for efficient OS installation along with dual microSD capability for VMware ESXi, plus the latest USB 3.2 Gen 2 ports. Furthermore, the TX1320 M5 server features the iRMC S6 and the Fujitsu Infrastructure Manager (ISM) suite, which enable remote server management and centralized IT infrastructure control respectively, hence boosting IT administrator productivity.

### Notes

#### Compatibility

If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A final statement and/or commitment on the compatibility of such deviating or other system components and applications can only be provided after a corresponding verification through a dedicated compatibility testing.

#### Continuity management

The product may in connection with and depending on the specific configuration include elements to support time- and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a standalone product feature. If and to the extent the product is to be used in such business-critical environments, it is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster), redundancies, and operational conditions as required to ensure such high availability or failsafe performance.

#### Security

The properties of the product provide a baseline for product security and therefore end-customer IT security. However, these properties are not sufficient on their own to protect the product from all existing threats, such as intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use the configuration options as available for the respective product. During operation, the IT security of this product is within the responsibility of the respective administrator/end-user of the product.
