

Data sheet

Red Hat Enterprise Linux Server

In line with Fujitsu's Linux strategy, all PRIMERGY servers are being released and certified for Red Hat Enterprise Linux Server. Fujitsu offers low-price Red Hat Enterprise Linux Server products and suitable Support Packs.

Features

Linux Value Proposition

Fujitsu offers best-in-class support for Windows and Linux with the same level of commitment for those operating systems. Fujitsu is a full-line infrastructure provider with close cooperation to leading Linux distributors, ISVs and service partners.

All PRIMERGY servers are being released for the current and predecessor version of Red Hat Enterprise Linux Server. Once released for Linux all servers will be maintained regarding hardware, BIOS and Linux updates. They will also be re-released for new Linux versions according to Fujitsu's PRIMERGY Linux release strategy.

Red Hat Enterprise Linux Server Overview

Red Hat Enterprise Linux Server is an enterprise platform well-suited for a broad range of applications across the IT infrastructure. Red Hat Enterprise Linux sets standards by offering greater flexibility, efficiency, and control. It works across a broad range of hardware architectures, hypervisors, and clouds. Corporations and agencies that standardize on Red Hat Enterprise Linux Server are free to focus on building their businesses, knowing they have a platform that delivers more of what they need.

The products are described under <http://www.redhat.com/rhel>

Features

OEM Subscriptions and Fujitsu Services

The Red Hat Enterprise Linux Server (RHEL) can be purchased from Fujitsu as an OEM product according to the Red Hat product structure and Fujitsu service offers based on those. In the following these fix bundles, comprising subscriptions and related services, will be called products.

Server products can either be installed physically on any server with the right to deploy up to four virtual machines or as right-to-use each subscription for deployment of up to two virtual machines in a virtualized environment.

On top of the server subscription there are add-on subscriptions for optional, chargeable extensions of the base system. These add-on subscriptions inherit the service level (Premium or Standard Support) from the installed server subscription. Those level 3 subscriptions must also be completed by respective additional Support Packs.

The subscriptions for one, three or five years can be used for all versions of Red Hat Enterprise Linux Server on all the PRIMERGY models that are released for it. These subscriptions entitle customers to download and deploy patches and also service packs up to and including the new versions that Red Hat makes available for Red Hat Enterprise Linux Server. With the purchase of a Linux subscription customers receive a software key, which enables the necessary registration in the Red Hat portal.

Maintenance

The Red Hat Enterprise Linux Server products include the right for a limited period of time to use patches, updates and even version upgrades **on the licensed server**. These are all provided on the Red Hat Network (RHN). The subscription documents include the key for the necessary access to the Red Hat Network.

More related information can be found at <http://www.redhat.com/software/subscriptions.html>.

Support

Under the agreement Fujitsu undertakes to provide level 1 and level 2 support - i.e. related Support Packs and Service Contracts - for the products. To enable this requirement to be met, products also entitle Fujitsu level 2 support to use Red Hat's product-related level 3 support, which is responsible for handling and rectifying Linux problems after they have been clarified and passed on from level 2 support.

To use any level of support it is necessary to register the relevant hardware on the Red Hat Network by using the key provided via the Linux subscription.

Terms & Conditions

The following regulations have to be observed.

1. Generally, all OEM products may only be used on released and certified Fujitsu hardware.
2. Initially, subscriptions may only be purchased together with the hardware on which they are to be used. They are offered with terms of 1, 3 and 5 years. Since these products are version-independent, it makes economic sense to opt for multiple years. The three-year products are offered at 15% discount on the total price of three single-year subscriptions.
3. In case of hardware replacement subscriptions may be transferred from the old to the new hardware.
4. Different offerings for initial and renewal are available. Renewals for customers with initial orderings before 1.6.2016 can use renewals with special release.
5. According to the OEM regulation for each Red Hat Linux subscription, which only comprises Red Hat level 3 support, additional level 1 and level 2 support from the Fujitsu service price list is mandatorily required, as otherwise the handling of Linux customer problems is not possible.
6. The service products are not tied to the hardware, but to the subscription with all its limitations. A valid subscription must always exist for the whole service period.
7. By using Red Hat OEM subscriptions and Fujitsu Support Packs the customer accepts the related terms and conditions of Red Hat and Fujitsu.
