ServerView Update Manager Express

Installing firmware, BIOS and Windows drivers using ASPs and PSPs

Introduction

The Update Manager Express on the Fujitsu Software ServerView® Update DVD installs firmware, BIOS and Windows drivers for various components in Fujitsu PRIMERGY and PRIMEQUEST servers. During the installation the Update Manager Express uses self-extracting and self-installing software packages known as Autonomous Support Packages (ASPs) for BIOS and Firmware or PRIMERGY Support Packages (PSPs) for Windows drivers respectively.

The DVD-ISO-image on the ServerView Update DVD includes a bootable OS (CentOS).

With it a Fujitsu PRIMERGY server can be booted and BIOS/FW updates can be installed autonomously of the disk storage system within the server.

Additionally, the DVD-ISO-image includes a tool to copy the content of the DVD to a bootable USB stick. With version 12.16.12, there is the additional possibility to generate a bootable ISO image.

Beginning with version 12.17.09 the PSPs are no longer on the ServerView Update DVD because they didn't fit on one double layer 8 GByte Image any more. There will be an additional repository image in the download area that is not bootable but contains the complete actual FW tree including all ASPs and PSPs and will be bigger than 8 GByte.

In contrast to the Update Manager of the FUJITSU Software ServerView Suite which can supply entire data centers with firmware, the Update Manager Express is ideal for locally updating individual systems.

With online Windows and Linux operating systems the firmware and BIOS can be installed using the graphic user interface of the Update Manager Express or via the command line interface (CLI). Additionally, with Windows the possibility to install drivers

is given. Prerequisite for the online use are installed ServerView Agents and a 64Bit JAVA Runtime Environment (JRE).

Availability of ASPs and PSPs

The current ASPs and PSPs can be found:

- in the ServerView Update DVD-ISO image on support.ts.fujitsu.com under Driver & Downloads → server selection → Server Management Software → ServerView Update DVD.
- in the update repository of the ServerView Update Manager on support.ts.fujitsu.com/globalflash.

In addition, the download area offers a tool named Content Collector. It allows selecting the relevant BIOS, firmware and drivers for particular systems and components prior to their download from the Update Repository. This firmware tree is then copied to a bootable USB stick. The major benefit is that this way it is no longer necessary to download the entire Update DVD, but only the much smaller ServerView Update DVD Base.

Starting the Update Manager Express via PXE-boot allows a PXE-based mass update of servers.

Update Manager Express updates the firmware of your hard disk drives via HDD-Flash. This task can be performed either via the graphical user interface or via the CLI of the Update Manager Express.

Additionally Update Manager Express offers the option to collect and store hardware and software information of a PRIMERGY server in a PrimeCollect archive – even when the server was booted with CentOS.

ServerView Update Manager Express and ASPs

Installation of BIOS and Firmware

There are these options for installing BIOS and firmware:

- The graphic user interface of the Update Manager Express is used to install BIOS/firmware/Windows drivers for all server components in a Fujitsu PRIMERGY system either in one go or specifically for individual components.
- The individual ASPs can be started via mouse click on the *.exe file in Windows Explorer and installed via the ASP graphic interface.
- The Windows prompt provides the ASP commands (CLI) with which the installation can be implemented either controlled via the Wizard or in background.
- With Linux the Update Manager Express can be started via a command after the ServerView Update DVD has been mounted. The graphic user interface including the 3 operating modes as described above is not different from that with Windows.
- Also with Linux the ASPs can be directly executed via CLI. If necessary, the installation process can be monitored.
- Furthermore, a CLI enables to use ServerView Update Manager Express in existing or scripted environments.

ServerView Update DVD

The ServerView Update DVD is booted first (CentOS is included in the ServerView Update DVD image) and then Update Manager Express is started. Because the latest Update DVD (from version 11.15.01) uses 64Bit CentOS 7 only server are supported for which 64Bit Red Hat ServerView Linux Agents are available:

For older server models the previous Update DVD version 11.14.11 is still available on the download server. Alternatively ServerView Update DVD Base version 11.14.11 can also be used and loaded with latest firmware selected with the help of the ServerView Content Collector.

ServerView Update Manager Express

If one of the following operating systems already runs on the Fujitsu PRIMERGY server the Update Manager Express can be started directly:

- Microsoft Windows Server 2008 Service Pack 2
Web, Standard, Enterprise, Datacenter, 32 Bit, x64
- Microsoft Windows Server 2008 R2 (also Service Pack 1)
Web, Standard, Enterprise, Datacenter, x64
- Microsoft Windows Server 2012
Microsoft Windows Server 2012 R2
Web, Standard, Enterprise, Datacenter, x64
- Microsoft Windows Server 2016
- Microsoft Windows Server 2019
- SuSE SLES 11 and newer Service Packs
32 Bit and x64
- SuSE SLES 12 and newer Service Packs
- SuSE SLES 15 and newer Service Packs
- Red Hat 5 and newer Service Packs
32 Bit and x64
- Red Hat 6 and newer Service Packs
- Red Hat 7 and newer Service Packs

Update Manager Express offers 3 operating modes:

- Quick Mode:
the BIOS/firmware installation (update) runs completely automatically on the server components.
- Normal Mode:
BIOS/firmware/Windows drivers which is/are to be updated can be selected specifically.
- Expert Mode:
additionally, an older BIOS/firmware/Windows driver version can be reset.
