

Refresh your Infrastructure, Reinvigorate your Business

As Windows* Server 2003 approaches end-of-life, it's time to upgrade to Windows Server 2012 along with the Intel® Xeon® processor E5-2600 family. The results will help drive better efficiency and performance for your IT operations.

PAIN

AGED INFRASTRUCTURE SLOW AND DIFFICULT TO MAINTAIN

Limits on virtualization

Excessive power costs and constraints

Security risks

PROBE

How old is your installed base?

Is your equipment out of warranty?

Are you sufficiently protecting your data?

Are you virtualizing on-premise, or moving to public cloud?

GAIN

Upgrading to Windows Server 2012 with an Intel® Xeon® E5-2600 processor-based infrastructure along with Intel® SSD 510 Series and Intel® 10 Gigabit Ethernet can produce:

- Improved performance
- Higher reliability
- Lower TCO/higher ROI
- Enhanced security and data protection
- Improved customer satisfaction

VALUE

Windows Server 2012 and Intel® Xeon® infrastructure are better together.

Up to a **585%** boost in performance¹

Up to a **66%** decrease in idle power consumption²

Easier & faster encryption—over **10X**

Up to **30%** reduced latency

Estimate your server refresh savings: www.intel.com/xeonestimator

Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products.

See Page 2 for footnote and testing configuration information.

Footnotes and configurations for *Refresh Your Infrastructure, Reinvigorate Your Business.*

- 1 Estimated SPECint*_rate_base2006 results for 2S server platforms based on Intel® Xeon® Processor E5-2690 vs.. Intel® Xeon® Processor X5365. See below for configuration details.
- 2 Estimated idle power results for 2S server platforms based on Intel® Xeon® Processor E5-2690 vs.. Intel® Xeon® Processor X5365. See below for configuration details.
- 3 Results have been estimated based on internal Intel analysis and are provided for informational purposes only. Any difference in system hardware or software design or configuration may affect actual performance.

EXCEPT AS PROVIDED IN INTEL'S TERMS AND CONDITIONS OF SALE FOR SUCH PRODUCTS, INTEL ASSUMES NO LIABILITY WHATSOEVER AND INTEL DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY, RELATING TO SALE AND/OR USE OF INTEL PRODUCTS INCLUDING LIABILITY OR WARRANTIES RELATING TO FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

UNLESS OTHERWISE AGREED IN WRITING BY INTEL, THE INTEL PRODUCTS ARE NOT DESIGNED NOR INTENDED FOR ANY APPLICATION IN WHICH THE FAILURE OF THE INTEL PRODUCT COULD CREATE A SITUATION WHERE PERSONAL INJURY OR DEATH MAY OCCUR.

Intel may make changes to specifications and product descriptions at any time, without notice. Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined". Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them. The information here is subject to change without notice. Do not finalize a design with this information.

The products described in this document may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, not across different processor families: Go to: <http://www.intel.com/content/www/us/en/processors/processor-numbers.html>

Results have been estimated by Intel based on benchmark or other data of third parties and are provided for informational purposes only. Any difference in system hardware or software design or configuration may affect actual performance. Intel does not control or audit the design or implementation of third party data referenced in this document. Intel encourages all of its customers to visit the websites of the referenced third parties or other sources to confirm whether the referenced data is accurate and reflects performance of systems available for purchase. For more information go to <http://www.intel.com/performance>

Intel does not control or audit the design or implementation of third party benchmarks or Web sites referenced in this document. Intel encourages all of its customers to visit the referenced Web sites or others where similar performance benchmarks are reported and confirm whether the referenced benchmarks are accurate and reflect performance of systems available for purchase.

Relative performance is calculated by assigning a baseline value of 1.0 to one benchmark result, and then dividing the actual benchmark result for the baseline platform into each of the specific benchmark results of each of the other platforms, and assigning them a relative performance number that correlates with the performance improvements reported.
