

Transform with Flash!

FUJITSU Storage ETERNUS AF

Powered by
Intel® Xeon®
processor

Accelerate, modernize and transform

It's not long since flash storage was reserved for services demanding maximum performance at any cost – like databases, analytics and trading apps. That was yesterday. With SSDs fast replacing hard drives as the new normal in IT infrastructure, think what it could do for your business. Flash is fast – with around 500 times better response times than disks. Enterprise Flash is by factors more reliable than HDDs and is becoming increasingly attractive – with prices in freefall, budget constraints don't have to stand in the way. And flash storage is a space-efficient, eco-friendly technology, providing higher den-

sity and consuming dramatically less energy for power and cooling than traditional drives. The FUJITSU Storage ETERNUS AF delivers all these advantages to the max. With ultra-low response times that set performance records, mirroring and transparent failover for non-stop operation, automated quality of service to minimize admin work, and flexible configuration for deduplication/compression capabilities, this system accelerates, modernizes and transforms your data center into a flash new world.

All-flash storage: fresh challenges

Powered by
Intel® Xeon®
processor

The economics of flash technology are more compelling than ever, and companies are beginning to transform tier-1 storage to all-flash for nearly all data services. To be ready for the challenges – like efficiently integrating all-flash and disk storage, using optimization technologies flexibly, and providing business continuity – it's best to work with a partner who can make it happen: Fujitsu with ETERNUS AF.

ETERNUS AF – the new business driver

- Less gear to manage
- More capacity per admin
- Take out risk with 5x faster rebuilds
- Automate manual tasks
- Forget about performance tuning
- No more tiering configurations
- Enjoy guaranteed Quality of Service
- Automate for the worst case

	ETERNUS AF250	ETERNUS AF650
CPU	6core, 2.0 GHz	10core, 3.0 GHz
Max system memory	64 GB	256 GB
Number of drives	2 - 48	2 - 192
Max capacity*	737 TB raw	2949 TB raw
Higher capacities will come in 2017	3686 TB effective**	14745 TB effective**
Interface	8x FC 16G / 8x iSCSI 10G	32x FC 16G / 16x iSCSI 10G
Included software	All-in FlashPack (Configuration, Management and Administration, Local and Remote Copy, Automated Quality of Service, Deduplication and Compression)	

*Maximum raw capacity depends on available types. **Calculation based on deduplication/compression factor of five.

ETERNUS AF Performance compared to disk systems

Time to flash

With ETERNUS AF, you enjoy ultra-low response times that set performance records.

The flash diet

"Always on" deduplication can extract a significant performance toll. With ETERNUS AF, you can switch deduplication on when you need to optimize capacity, and keep it off for high-performance SLAs.

Smart operations

With automated quality of service, you can assign priorities to applications. So instead of data performance being used at random, you can make certain each service gets the performance it needs.

100% data insurance

ETERNUS AF features full DR with mirroring and transparent failover. If the primary site fails, the secondary storage takes over – quietly and smoothly. Furthermore: failover can be executed between ETERNUS all-flash and disk models.

Keep it simple

ETERNUS AF has simplicity designed in. And that applies to everything. The GUI, the setup, daily operation and license model: end to end, the ETERNUS AF has it all covered, freeing up your time for value-adding activities.
