Fujitsu Private GPT – the GenAI  
solution with data sovereignty

Generative Pre-trained Transformer (GPT) models have given a boost to advanced Large Language Model (LLM) technology. Wouldn't it be great if you could use such an AI solution in your company, organization or authority? With Fujitsu Private GPT, we pave the way for you. To this end, we work with you to identify your use cases and implement your Private GPT tailored precisely to your business needs – trained with your data and implemented on your premises to ensure maximum data sovereignty and security.

Fujitsu Private GPT is a complete GPT package, from consulting on your specific use cases and training the AI model exclusively with your data to implementing the solution in your data center. This means that you have full control over the AI model as well as the data used and can be sure that all your data protection requirements are met.

The turnkey AI solution includes all hardware and software, setup and support from our partner ecosystem. With monthly payment models, which we offer as part of Fujitsu uSCALE, you also benefit from maximum cost transparency.

#### Highlights of Fujitsu Private GPT

- **Custom AI model** – relevant and precise results, as it is optimized for your specific tasks and languages
- **Data sovereignty and security** – your sensitive data remain protected and under your control
- **Performance** – leverage the latest AI technologies on site, without internet dependency
- **Sustainable** – low energy costs, as designed for sustainability
- **Return on investment** – Immediate economic benefit, as tailored to your business needs and seamlessly integrated into your operations
