FUJITSU SystemInspection Service for Storage

Get valuable storage insights into your hybrid IT infrastructure

The data dependency of businesses in the digital world continues to grow. At the same time, analysts now expect data volumes to 10-fold each year, with IT infrastructures becoming increasingly hybrid. These trends increase risks in terms of data loss, data breaches, and compliance failures. In addition, planning and managing storage capacity in distributed infrastructures is becoming more challenging, thus driving up investment and operating costs.

How can you successfully respond to these challenges? With the help of detailed insights into your data streams. The **FUJITSU SystemInspection Service for Storage** for storage and backup is the solution that gives you key insights which help you discover what is consuming your valuable storage resources. The service provides you with a central, uniform view of your IT infrastructure, including storage systems, backup systems, and your virtualization environment, thus enabling you to take concrete action for optimization. **Gain comprehensive insight now so that you can minimize risks, strengthen data protection, optimize storage utilization, and reduce your CAPEX and OPEX.**

FUJITSU

shaping tomorrow with you

Optimize today. Innovate effectively tomorrow.

The FUJITSU SystemInspection Service for Storage is an efficient fixed-price assessment package for existing storage and backup infrastructure environments. The goal is to provide you with valuable reports on your current status and potential risks, along with optimization recommendations. The report enables you to make the right decisions about how to move forward, with details about what you need and what you don't need, and where to invest for future business success.

Careful analysis and auditing of the current storage and backup infrastructure

**Initial analysis of your current operations**

We assess the performance of your backup processes, precisely measure your workloads, check for compliance issues, and determine whether your business-critical applications are at risk.

In-depth customer workshop

We match the collected data with your business strategy and requirements to help you reduce your CAPEX and OPEX.

Clear guidelines for the optimization of your IT landscape

Improve flexibility, with end-to-end visibility
Get an unimpeded overview of your multi-vendor IT infrastructure and eliminate information silos in your infrastructure.

Reduce the cost and complexity
Successfully meet increasing costs and complexity in your hybrid environment and avoid the use of point solutions from different vendors with a central approach.

Optimize data center resources
Improve utilization and performance with data gathered from up to 30,000 unique data points across backups, storage systems, hosts, hypervisors and storage networks.

Predict failures and mitigate risk to SLAs
Proactively optimize system and backup performance – in addition to aligning service level agreements (SLAs) with your business goals.

Get actionable insights
Meet audit and compliance requirements by reducing the complexity of data protection and mitigating policy conflicts as well as human error.

FUJITSU SystemInspection Service for Storage helps customers in all industries to work smart, fast and secure in a world of digital transformation.

FUJITSU – your trusted advisor for all your data!
