

## Top reasons to invest in

### Veritas NetBackup Appliances

Veritas NetBackup appliances are fully integrated solutions that take less than 30 minutes to set up. Embedded cyber security protects the systems against digital intruders. Application awareness for virtual environments and databases reduces load on applications, network and host systems, and enables co-management between backup owners and application owners. The appliances are completely integrated and from one mold for easy, end-to-end consistent system maintenance to help reduce operational costs.

### Why FUJITSU?

Fujitsu and Veritas have worked together successfully for more than 20 years. Fujitsu is your single source for the best technologies and solutions for ensuring optimal data management and protection – from backup software and storage systems to target-based appliances and integrated appliances. The combination of Veritas NetBackup Appliance and ETERNUS CS appliance enable Fujitsu to provide just the right solution for specific individual scenarios. The strategic partnership of Fujitsu and Veritas shares the same philosophy: To offer customers future-proof solutions to meet the challenges posed by unbridled data growth. The top performance, seamless integration and high flexibility of the products and solutions provided by both partners make life much easier for their customers.

## FULLY INTEGRATED SOLUTION FROM ONE MOLD

Integrated purpose-built backup appliances provide end-to-end solutions with perfectly harmonized components including seamlessly integrated software. Integrated appliances reduce the time and resources needed to design, test, deploy, patch, manage and maintain your backup infrastructure compared to building your own media server.

### Your advantages

- Optimal backup with faster deployment time – setup takes less than 30 minutes!
- More reliability – there is no need to test and harmonize individual components, and there are fewer compatibility problems
- Efficient management resulting from automated monitoring of important appliance components and a familiar administration environment for existing NetBackup users

## INTELLIGENT END-TO-END DEDUPLICATION

The Veritas NetBackup appliance provides deduplication at both the source and target side with one integrated offering. This makes it much easier for customers to realize their own tailor-made backup and deduplication strategy.

### Your advantages

- Efficient deduplication – flexible scalability from a broader capacity range supports the formation of larger pools for deduplication
- Less work – there is no longer any need to maintain several different pools for deduplication
- Lower costs – intelligent and consistent deduplication reduces the backup volume by a factor of up to 50

## STREAMLINED PROTECTION OF ORACLE DATABASES

NetBackup appliances can be integrated in all infrastructure stack layers – this also applies to virtual environments as well as leading application and database platforms. NetBackup Copilot for Oracle creates an optimized solution for the protection of Oracle databases to keep them compliant and accessible as needed.

### Your advantages

- Faster backups and restoration of Oracle databases
- Less impact on production environments
- Better coordinated workflows between database and backup administrators

## ENHANCED SECURITY – EMBEDDED CYBER SECURITY

Gain visibility and control of your data with a unified data protection approach across remote locations. NetBackup appliances offer a hardened operating system with embedded intrusion detection.

### Your advantages

- Mitigate risks and identify data that is critical to your business
- Centralize data protection with secure disk backup to prevent data loss
- Integrated security to fend off digital intruders

## FAST AND SIMPLE – REMOTE BACKUP

Management of backup and recovery in remote offices is smooth when the backup process is simple, reliable and efficient. This is possible when backup data traffic via WAN (Wide Area Network) or the Internet is kept to a minimum. That is the only way to ensure the speed and efficiency of backups.

### Your advantages

- Intelligent change entries and deduplication minimize backup data traffic
- WAN optimization increases speed – backups to main sites are up to 10 times faster
- Easy to manage – no IT specialists are required in subsidiaries
