

Data management for Local IT

For CIOs, hybrid IT is the new normal.

Companies are taking to the clouds!

But there's still a place for local IT:

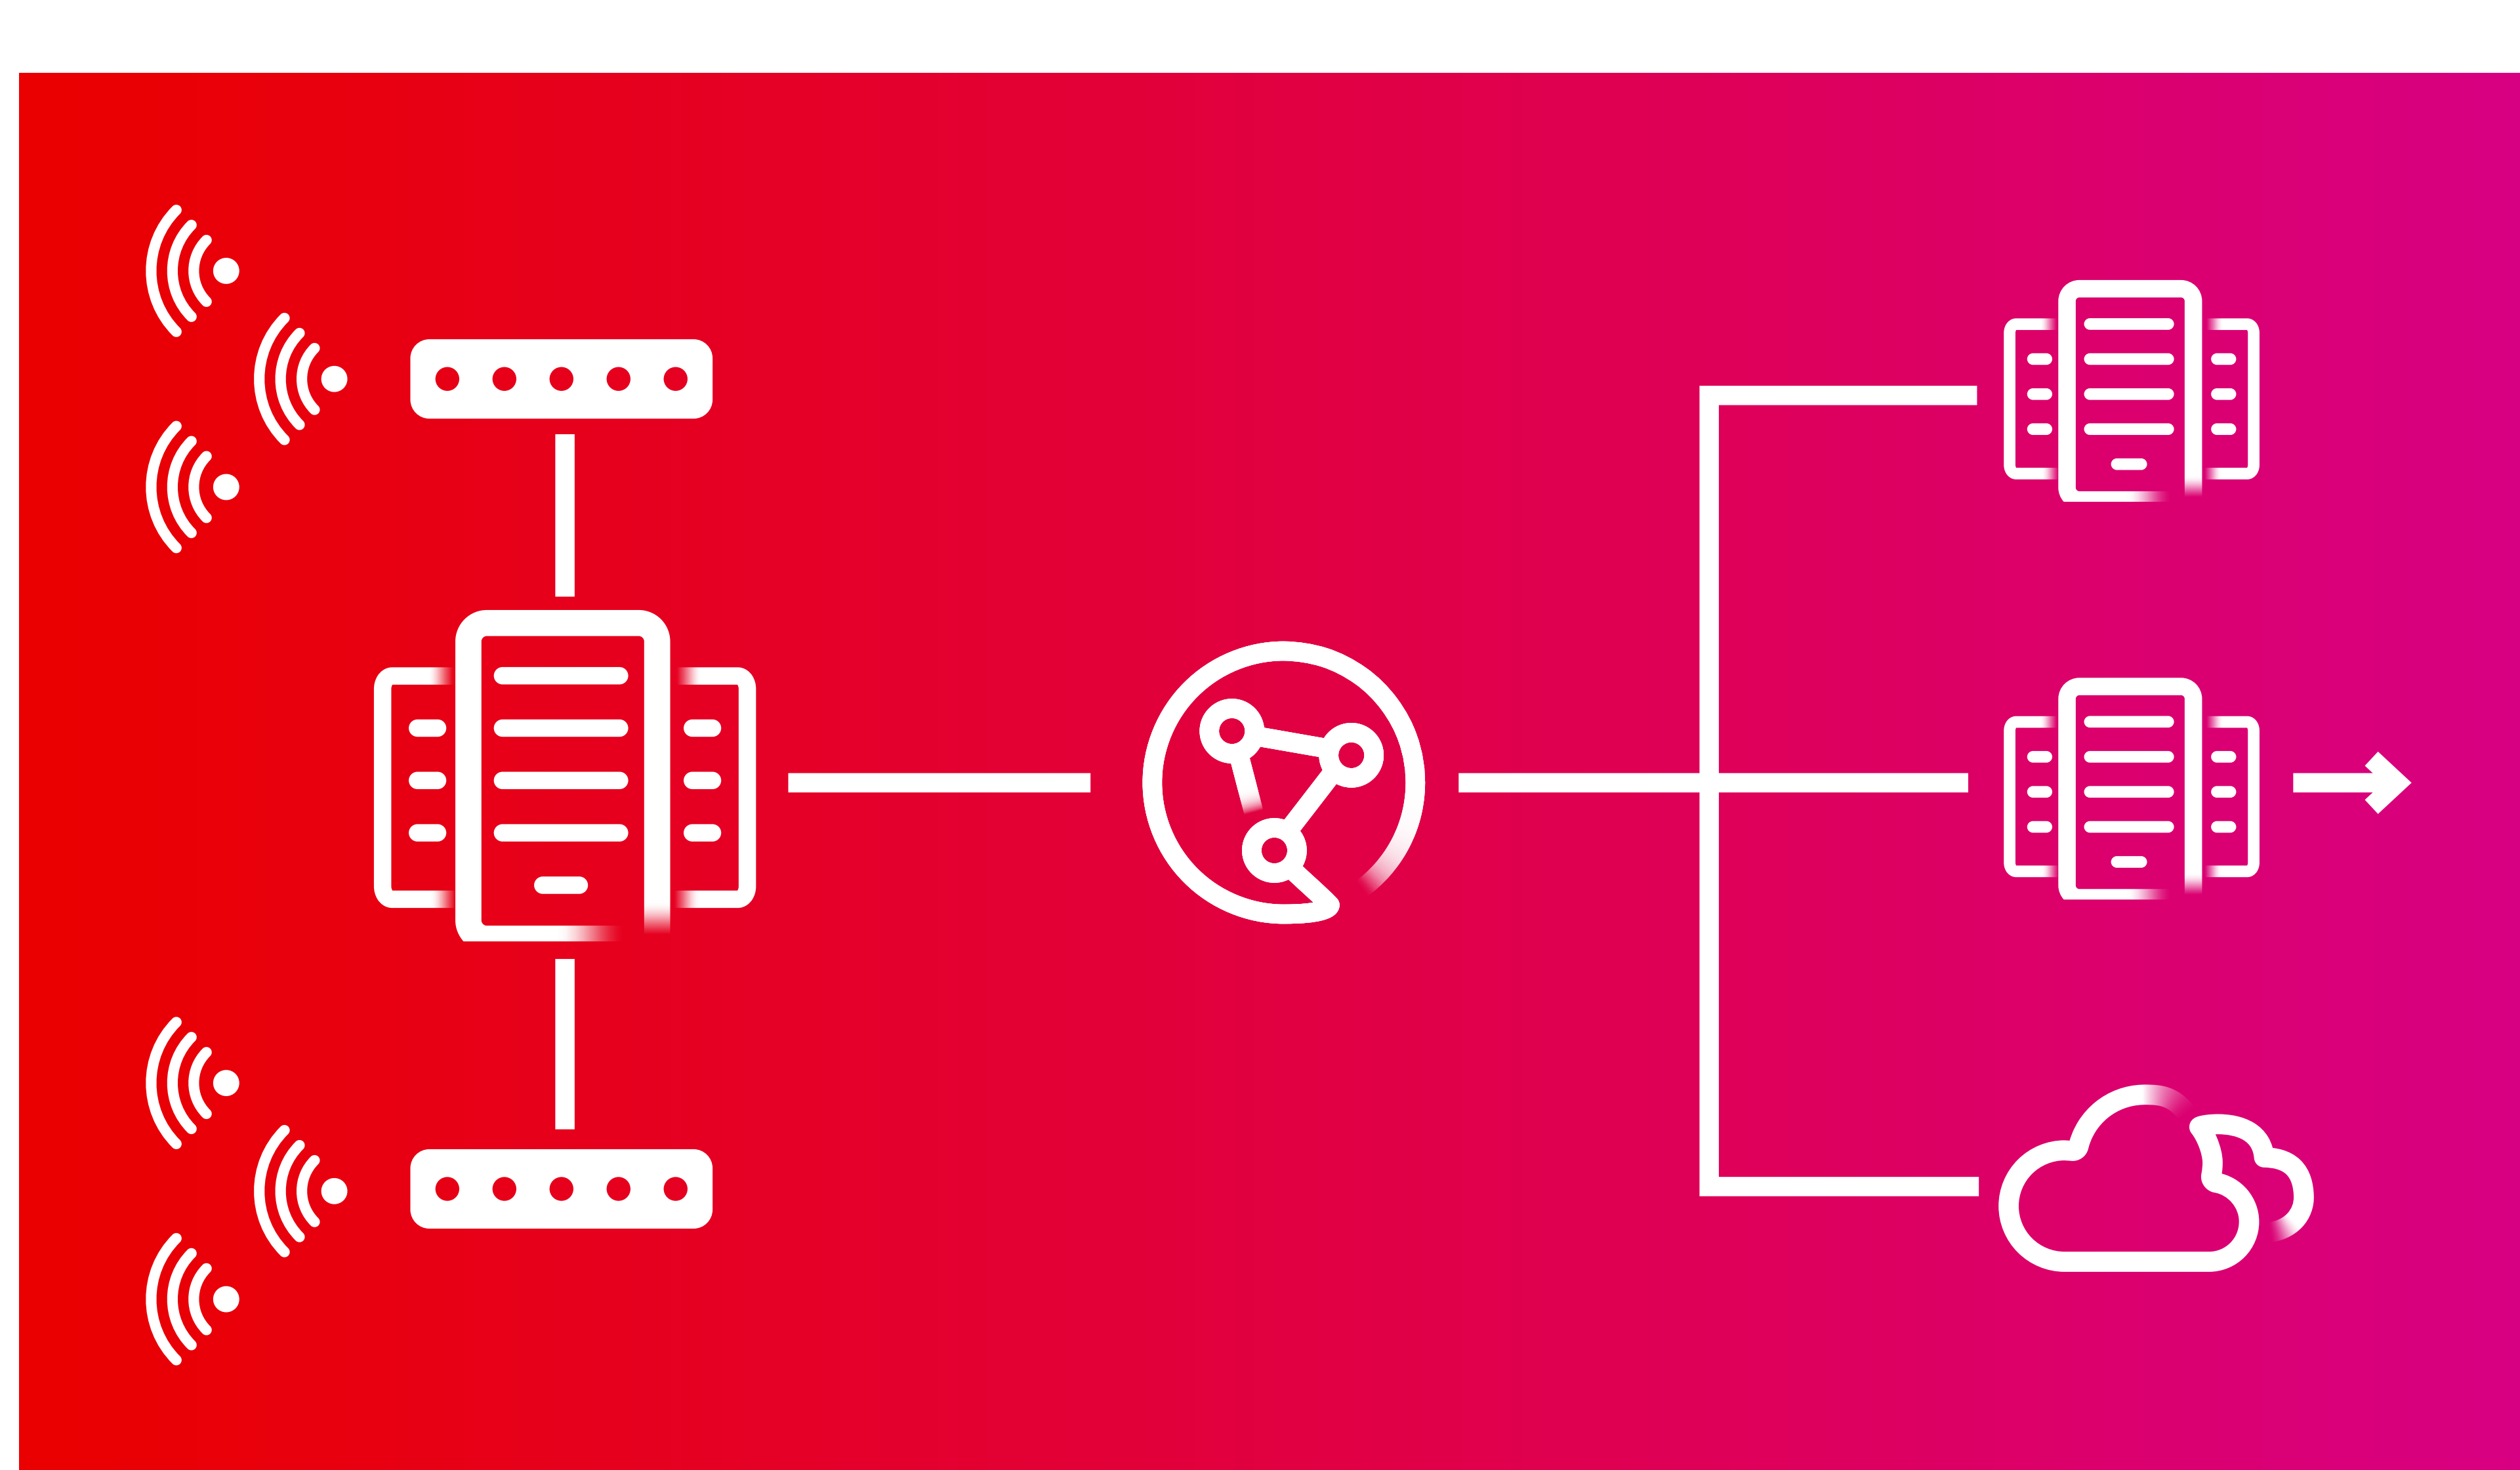

For complex, purpose-built applications running on dedicated hardware

For remote & branch offices without resources to run applications or host data in the cloud

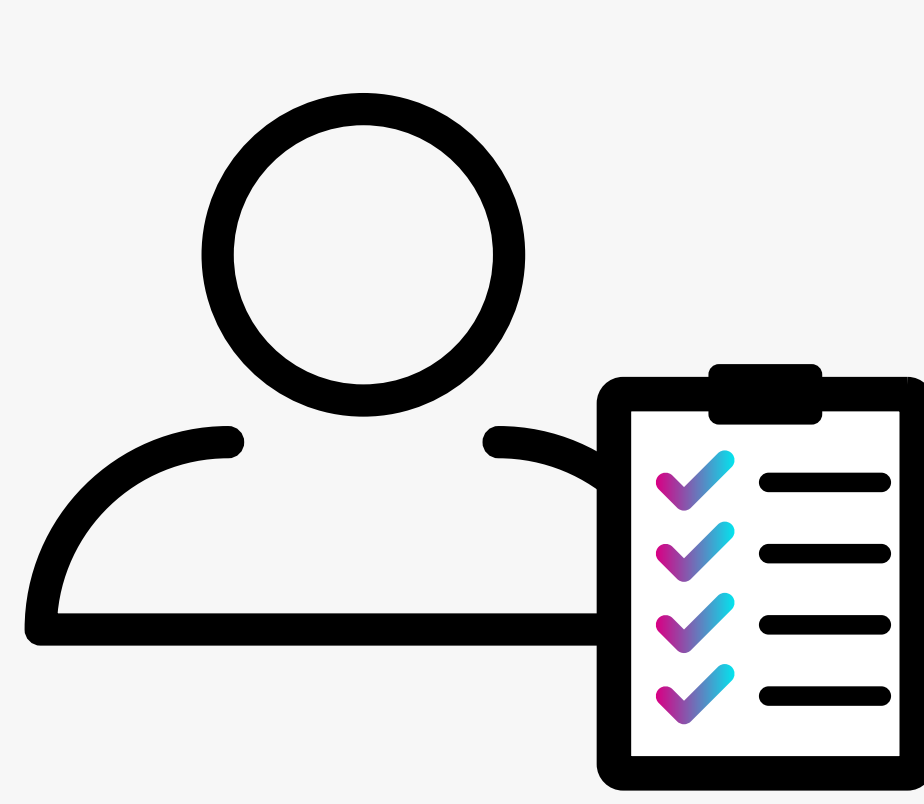

Local IT

Central IT

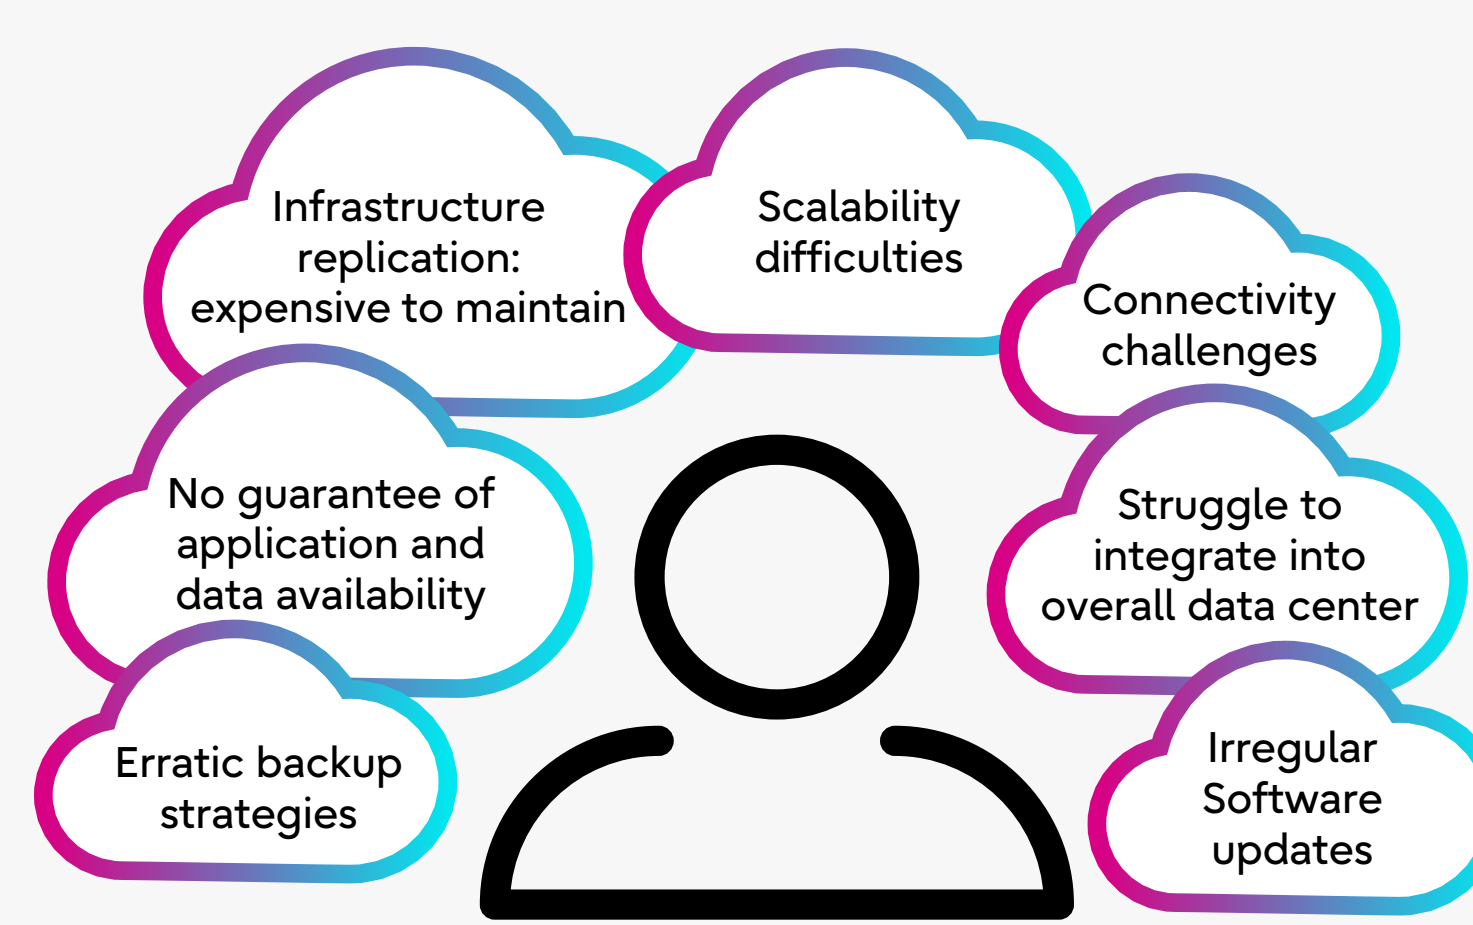

Local IT creates unique challenges for CIOs

CIO aim: IT Standardization

CIO reality:

What if you could take cloud benefits local?

Speed

Agility

Consistent data management at all locations

You can – with NetApp® ONTAP® Select in combination with Fujitsu PRIMERGY servers.

Take software-defined storage to remote offices or data centers

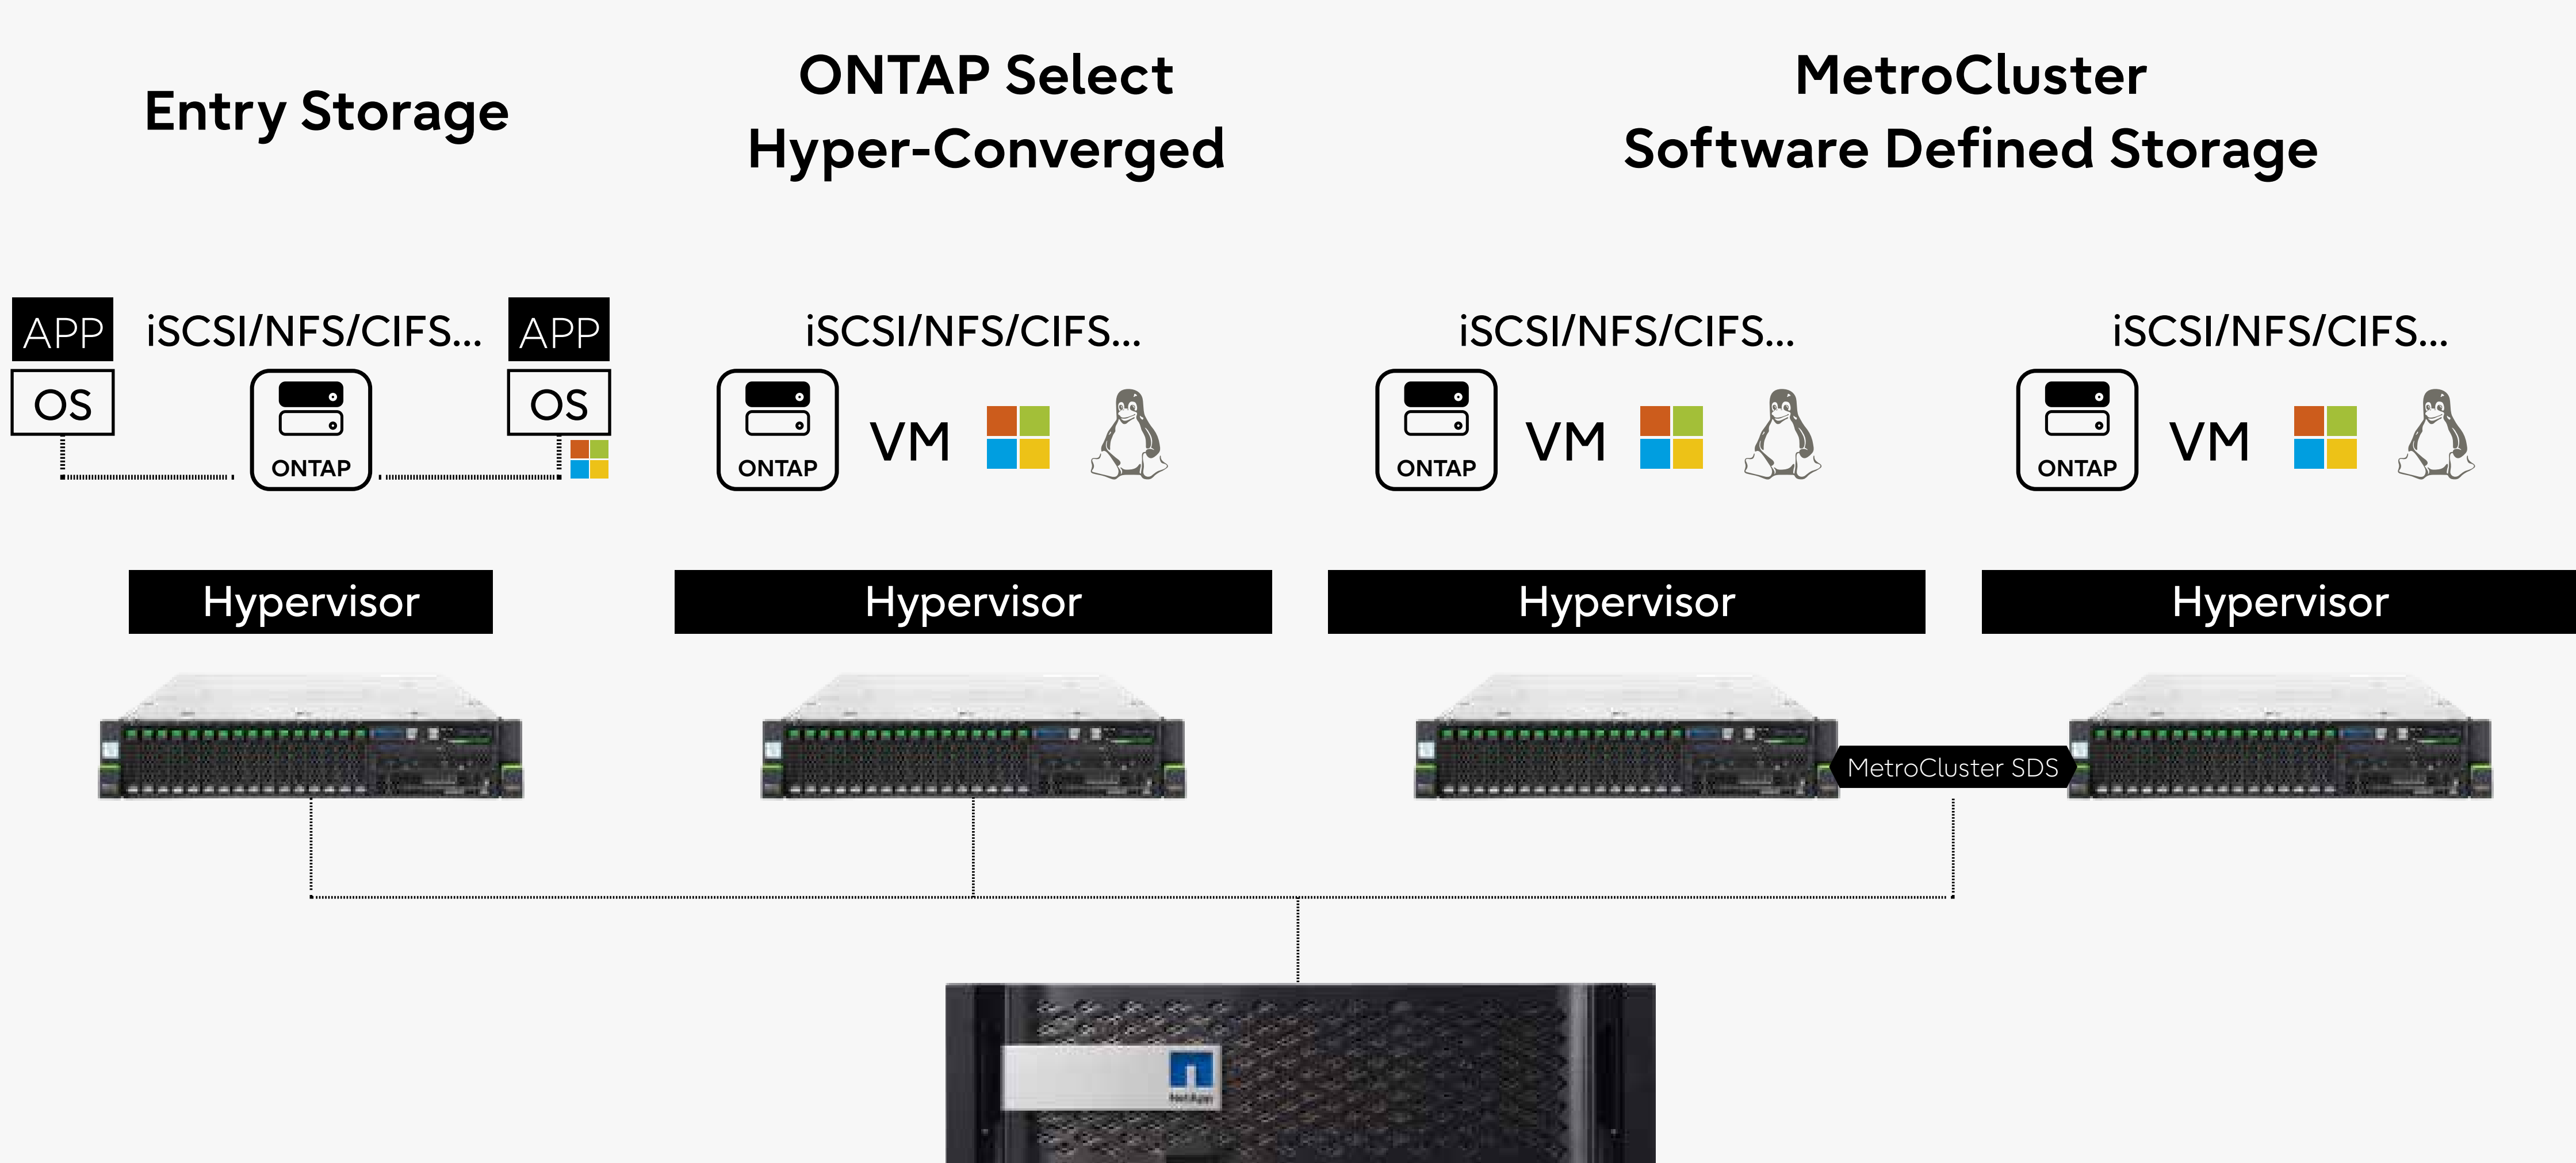

Add capacity in small increments – no big upfront investment

Reduce capacity with data reduction technologies

Repurpose server infrastructure (or HCI)

Imagine the benefits to your business!

- Runs on x86 PRIMERGY servers
- No need for dedicated storage system at remote sites with smaller data volumes
- No need for storage experts on site
- Efficient data protection everywhere (ROBO to central IT)
- Uniform, consistent data management, wherever data is located
- Backup & recovery connects local IT to central data center

“With ONTAP Select on PRIMERGY, we gain great support for our production and logistics processes in our two plants in Wahlstedt. We demanded a virtualization solution decoupled from the hardware, which is easy to use and which offers a wide range of data services to pave the way to a Hybrid Cloud. The combination of operating software from NetApp and PRIMERGY servers from Fujitsu turned out to be a perfect match.”

Peter Kleen, Head of IT Services at Lichtenheldt GmbH

Discover how NetApp ONTAP with Fujitsu PRIMERGY servers can transform data management for your local IT.
