

Turn your SAP into a private cloud

PRIMEFLEX for SAP Landscapes

Wouldn't it be great if your own infrastructure behaved like a cloud?

With your IT systems made available for your SAP applications?

And with everything fully automated?

The solution is at hand: Integrated System PRIMEFLEX for SAP Landscapes

Works like Cloud

Allocate server, storage, and network resources to SAP applications fully automated

Scales like Cloud

Conduct hardware replacement and expansion online without downtime

Connect to Cloud

Connect to public cloud instances for workload migration or disaster recovery

Pay like Cloud

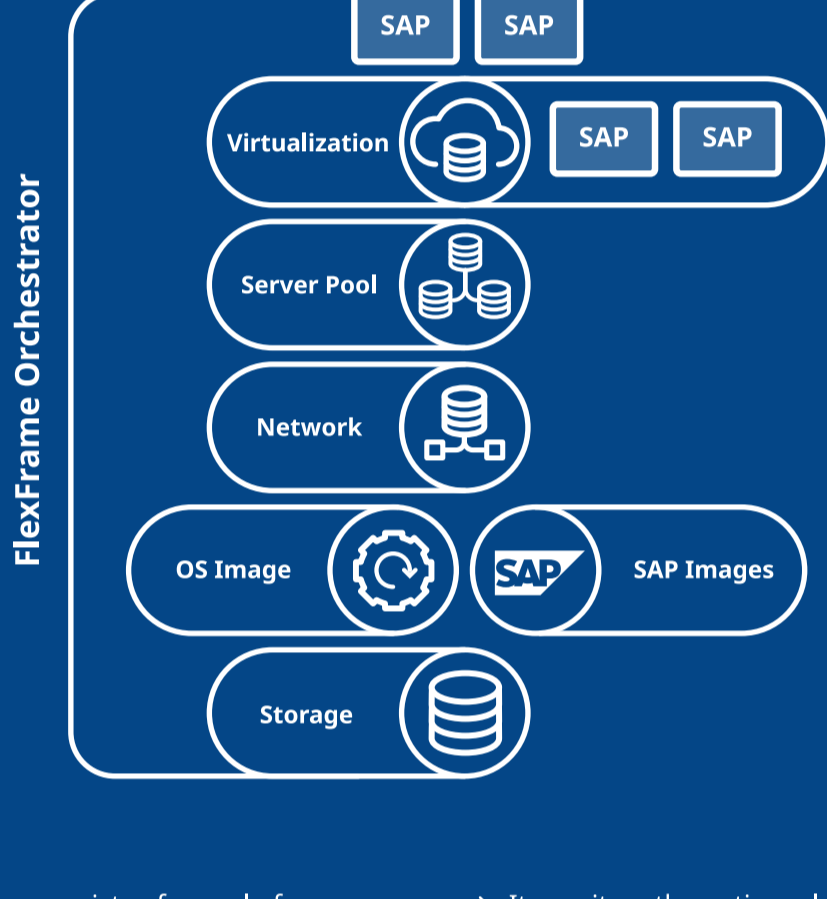

Implement optional pay-per-use consumption with uScale

More than Cloud

Ensure automated recovery in case of system failures including restart of applications

How does it work?

→ The hardware consists of a pool of servers, storage systems and an internal network

→ The solution is centrally managed by the FlexFrame Orchestrator software

→ Allocation of physical or virtual system resources to SAP applications via Netboot

→ It monitors the entire solution – including the application level

→ SAP services which belong together are automatically started on the selected systems

Co-create with Fsas Technologies a data-driven transformation strategy based on your SAP environment

We explore your SAP landscape to identify the right platform requirements

We deliver business value with technologies like AI and advanced analytics

We design a future-proof hybrid data architecture

We protect and secure your data
