

High End Application Server

■ Functionality of the openUTM Application-Server:

- Acting as Runtime-Environment for Service Routines
- Service Routines only must be „plugged in“ - by Configuration
- Service Routines uses standard interfaces to the *openUTM* Application-Server (X/Open: CPI-C, TX, XATMI; DIN: KDCS)
- Service Routines have direct access to the DBMS (SQL, ODBC)
- Coordination of transactions with the DBMS
