

Product Insights

SUSE Linux Enterprise Server for PRIMERGY Servers

In addition to the SUSE Linux OEM products (Level3 Support subscriptions), Fujitsu offers a uniform service for SUSE Linux Enterprise Server on PRIMERGY servers across WEMEIA.

SUSE Linux Enterprise product structure

The offer for SUSE Linux Enterprise Server is divided into the following product classes:

- Subscriptions (supply of software corrections for a limited period of time, upgrades, new versions and level3 Support by SUSE)
After registration (see below) electronic media kits can be downloaded from SUSE Portal.
- Maintenance Services as level 1 and 2 support by Fujitsu; support level 3 is provided by SUSE. Subscriptions

Subscriptions

SUSE Linux Enterprise (SLES) can be purchased from Fujitsu as an OEM product according to the SUSE product structure and Fujitsu support offers based on those. The subscriptions can be used for all versions of SUSE Linux Enterprise on the PRIMERGY models for which they have been released. The subscriptions authorize the downloading and deployment of patches and service packs up to and including the new versions that SUSE makes available for SUSE Linux Enterprise Server. With the purchase of a SLES subscription customers receive a software key, which needs to be registered in the SUSE Customer Center portal <https://scc.suse.com/login>.

Maintenance Services

In addition to the SUSE Linux Enterprise subscriptions Fujitsu offers a mandatory uniform maintenance support for SUSE Linux Enterprise on PRIMERGY servers.

Whereas subscriptions are used to supply patches, fixes and upgrades (including version upgrades), support comprises the provision of customer support by telephone or on a remote basis in the event of errors. Here customers receive telephone consulting and competent diagnosis of their problem, which can be efficiently provided - especially by directly accessing the system concerned.

With Linux support we offer - as known from other product segments - services with short reaction times. The service times range from 5x9 hours to 7x24 hours. Reaction time (time from call acceptance through to call-back by the support specialist) is 4 hours.

The support is only available for released hardware from Fujitsu. Support is provided in German and English. With purchase of a Linux Support Pack customer receives an activation key that enables the necessary activation with Fujitsu.

If a fault cannot be resolved directly through telephone consulting or remote support, it is escalated to the Fujitsu development department or to SUSE (3rd level support).

The service can be obtained in two different ways:

- via the System Architect / P82
Support Packs can be ordered here. This order option was introduced to provide a coordinated Linux offer directly with the hardware order - same duration for the subscription and for the support. The customer receives the key required to activate his support with Fujitsu together with the Linux support product he has purchased.
- via the Service Contract Configurator (SCC)
In addition to the Support Packs (support with a specified duration and initial once-only payment), Linux Service Contracts (monthly payment and automatic contract renewal after expiry of the minimum term of contract) are also offered here with the order number of the respective subscription (S26361-F2348-xxxx; see section 3).
Important: due to the variable duration of the service the contract owner is responsible for the availability of a valid SLES subscription for the entire term of the contract.

In both cases the customer also needs a SLES subscription that is registered with SUSE to enable access to current patches and updates.

Benefits of the maintenance service offering

- Centralized and competitive Linux service & support offering for all regions in EMEA and India
- A central contact point for the complete PRIMERGY infrastructure offering
- Supports increases in productivity through efficient approaches to solving problems
- Strategic business relationships and support agreements with important software partners
- Long-term customer loyalty

Terms & Conditions

According to our SUSE OEM contract the following regulations must be observed for the purchase of subscriptions:

- Generally all products described in this document may only be used on released and certified Fujitsu hardware.
- Initially subscriptions may only be purchased together with the hardware on which they are to be used. They are offered with terms of 1, 3 and 5 years. Since these products are version-independent, it makes economic sense to opt for multiple years.
- In case of hardware replacement subscriptions may be transferred from the old to the new hardware.
- All subscriptions and related Support Packs described below can also be used for renewal of expired contracts.
- According to OEM regulation for each SUSE Linux subscription, additional level 1 and level 2 support from the Fujitsu service price list is required mandatorily, as otherwise the handling of Linux customer problems is not possible.
- The service products are not tied to the hardware, but to the subscription with all its limitations. A valid subscription must always exist for the whole service period.
- By using SUSE OEM subscriptions and Fujitsu services customer is accepting related terms and conditions of SUSE:
Reference: <http://www.suse.com/licensing/eula>

SLES Server Products & Support

SUSE Linux Enterprise Server product structure

SUSE differentiates two types of products and several add-on's:

- **Subscription for "1-2 Sockets or 1-2 Virtual Machines"** (SUSE LES 1-2 Sock/VM)
These subscription offerings allow for flexible deployments on physical servers and low-density or cloud virtualization. They can be used either for deployment on a physical server with up to two populated sockets or for virtualized environments for two virtual machines running SUSE Linux Enterprise. For servers with more than 2 populated sockets, subscription offerings must be aggregated (or stacked) to match or exceed the number of populated sockets. This subscription does not include the right to run virtual guests by using XEN or KVM technology.
- **Subscriptions for "1-2 Sockets with Unlimited Virtual Machines"** (SUSE LES 1-2 Sock uVirt)
For high-density virtualized deployment SUSE offers a subscription for "1-2 Sockets with Unlimited Virtual Machines." This subscription offering entitles an unlimited number of virtual machines per 1-2 Sockets on a virtualization host. For virtualization hosts with more than 2 populated sockets, subscription offerings have to be aggregated (or stacked) to match or exceed the number of populated sockets. This subscription offering can be used on any third party hypervisor. It also includes the entitlement to run SUSE Linux Enterprise with XEN or KVM as the hypervisor on the virtualization host. If virtual machines are migrated from a virtualization host with this subscription to another virtualization host the destination host has to have a sufficient number of free subscriptions available.
- **Subscriptions for servers with SLES for SAP Applications**
These subscriptions offerings are also available as "1-2 Sockets or 1-2 Virtual Machines" (SUSE LES 1-2 Sock/VM) or "1-2 Sockets with Unlimited Virtual Machines" (SUSE LES 1-2 Sock uVirt). SLES for SAP Applications subscriptions are including additional features compared to the standard subscriptions:
 - Support for the SAP required Java Virtual Machine
 - Page-cache limit
 - High Availability Clustering (HA Resource Agents (RA) to handle SAP)
 - Cluster File System support (OCFS2)
 - Dedicated SAP Update Channel
 - Installation Wizard – validated SAP solutions
- **SUSE Linux High Availability Extension** (SLES HA Extension 1-2 Sock)
Subscription offerings for Extensions to SUSE Linux Enterprise need to be deployed in addition to the required number of SUSE Linux Enterprise Server subscriptions. Virtualization type (1-2 Sock/VM or uVirt) and Service level are inherited from the underlying SLES subscription. The SLES HA Extension is not applicable to SLES for SAP Applications subscriptions as HA functionality is already included in those.
- **SUSE Linux Live Patching** (SLES Live Patching 1-2 Sock)
Subscription offerings for Extensions to SUSE Linux Enterprise need to be deployed in addition to the required number of SUSE Linux Enterprise Server subscriptions. Virtualization type (1-2 Sock/VM or uVirt) and Service level are inherited from the underlying SLES subscription.
- **SUSE Linux Long Term Service Pack Support** (SLES LTSS 1-2 Sock)
LTSS subscription offerings extend the support period of a Service Pack for SLES and SLES for SAP Applications. It gives additional 3-year support period to a SLES Service Pack. For SLES for SAP Applications, it is available to extend the support period for 2 years after expiration

of Extended Service Pack Overlap Support (ESPOS). LTSS needs to be deployed in addition to the required number of SUSE Linux Enterprise Server subscriptions.

One LTSS subscription is required per 1-2 Sockets with one Code Stream (= Service Pack). Virtualization type (1-2 Sock/VM or uVirt) and Service level are inherited from the underlying SLES subscription. By way of example, a physical server with 4 sockets needs two LTSS subscriptions. In the case of running SLES VMs with different Code Streams than the underlying SLES KVM Hypervisor, additional LTSS subscriptions are required for those different Code Streams on VMs. For example, running two SLES VMs with two different Code Streams (SLES12 SP1 and SP2) on one 4-socket SLES KVM Hypervisor (SLES12 SP2) requires two SLES 1-2 Sock uVirt subscriptions (for the host) and three LTSS subscriptions (two for the host with SLES12 SP2 and one for the other Code Stream, SLES12 SP1)

SUSE Linux Enterprise High Performance Computing product structure

Subscription offerings for HPC are as follows:

- **Subscription for "1-2 Socket"** (SUSE LES HPC 1-2 Sock)
These subscription offerings are used for Head Nodes and Compute Nodes. One SLES HPC Cluster must consist of a minimum of four physical nodes. They can be used for deployment on a physical server with up to two populated sockets. For servers with more than 2 populated sockets, subscription offerings must be aggregated (or stacked) to match or exceed the number of populated sockets. This subscription does not include the right to run virtual guests by using XEN or KVM technology.
- **Subscription for "1-2 Socket" with Extended Service Pack Overlap Support** (SUSE LES HPC 1-2 Sock ESPOS)
These subscription offerings are used for Head Nodes and Compute Nodes. One SLE HPC Cluster must consist of a minimum of four physical nodes. They include base SLES HPC subscription plus Extended Service Pack Overlap Support (ESPOS). They can be used for deployment on a physical server with up to two populated sockets. For servers with more than 2 populated sockets, subscription offerings must be aggregated (or stacked) to match or exceed the number of populated sockets. This subscription does not include the right to run virtual guests by using XEN or KVM technology.

ESPOS extends Service Pack life by 12 months. SLES HPC ESPOS provides 18 months of Service Pack overlap period (6 regular + 12 extended). After ESPOS period ends, you can combine SLES HPC or SLES HPC ESPOS with SLES HPC LTSS to have even longer support for the same Service Pack.

- **SUSE Linux High Performance Computing Long Term Service Pack Support** (SLES HPC LTSS 1-2 Sock)
SLES HPC LTSS is available as an additional offering for SLES HPC. LTSS subscription offerings extend the support period of a Service Pack for SLES HPC. It gives additional 3-year support period to a SLES HPC Service Pack.
One HPC LTSS subscription is required per 1-2 Sockets. Service level is inherited from the underlying SLES HPC subscription.

SUSE Manager product structure

SUSE Manager is an open source IT infrastructure management solution, which is composed of the following subscriptions:

- **Subscriptions for SUSE Manager Server (SUSE Mgr Server)**
SUSE Manager Server provides a lifecycle management functionality via a web-based user interface. An installation of SUSE Manager consists of at least one SUSE Manager Server instance. It is provided as a software appliance on a physical server or a virtual machine with an unlimited number of physical or virtual CPU sockets. No additional workloads are permitted to be deployed on the same instance. It does not require underlying SLES subscriptions unless it is deployed as a VM on SLES XEN or KVM hypervisor. (SUSE LES 1-2 Sock uVirt is required to run SLES XEN or KVM.)
- **Subscriptions for SUSE Manager Proxy (SUSE Mgr Proxy)**
SUSE Manager Proxy lowers bandwidth needs and provides faster local updates for environments across dispersed geographical locations. It is provided as a software appliance on a physical server or a virtual machine with an unlimited number of physical or virtual CPU sockets. No additional workloads are permitted to be deployed on the same instance. It does not require underlying SLES subscriptions unless it is deployed as a VM on SLES XEN or KVM hypervisor. (SUSE LES 1-2 Sock uVirt is required to run SLES XEN or KVM.)
- **Subscriptions for SUSE Manager Lifecycle Management (SUSE Mgr LC Mgmt)**
SUSE Manager Lifecycle Management is an additional offering for SLES and required for each instance managed by SUSE Manager Server. Like SLES, it offers two virtualization types, "1-2 Sock/VM" and "1-2 Sock uVirt". Virtualization type should be the same for both underlying SLES and SUSE Mgr LC Mgmt on one managed instance.
- **Subscriptions for SUSE Manager Monitoring (SUSE Mgr Mon)**
SUSE Manager Monitoring provides additional monitoring functionality for managed instances. Like SLES, it offers two virtualization types, "1-2 Sock/VM" and "1-2 Sock uVirt". Virtualization type should be the same for underlying SLES, SUSE Mgr LC Mgmt and SUSE Mgr Mon on one managed instance.

Support Packs

In addition to the SUSE Linux subscriptions, Support Packs covering 1st and 2nd Level support have to be ordered mandatorily. Whereas subscriptions are used to supply patches, fixes and upgrades (including version upgrades), Support Packs comprise the provision of customer support by telephone or on a remote basis in the event of errors. The service times range from 5x9 hours (Standard) to 7x24 hours (Premium). Reaction time (time from call acceptance through to call-back by the support specialist) is 4 hours.

Licensing rules

- Each subscription must be ordered together with the appropriate Support Pack or must be covered by a Service Contract or Solution Contract.
- For physical installation the number of subscriptions depends on the number populated sockets. A 4-socket server with two populated sockets only needs one subscription. A 4-socket server with three populated sockets requires two subscriptions (stackable). A "1-2 Sockets or 1-2 virtual machines" subscription must not be separated into two subscriptions for two server with one CPU each.
- Subscriptions for "1-2 Sockets or 1-2 Virtual Machines" cannot be intermixed with subscriptions "1-2 Sockets with Unlimited Virtual Machines" on one server. When stacked all subscriptions must have same service level (5x9h or 7x24h).
- When using subscriptions for "1-2 Sockets or 1-2 Virtual Machines" for two virtual machines these virtual machines must reside within a data center or virtualization environment.

Reusability (Re-purposable)

In principle, all subscriptions can be re-used when changing the server hardware. Thus, two subscriptions of the type SUSE LES 1-2 Sock / VM, which were used for a 4-socket server, can be transferred and used on two 2-socket servers. Likewise those two subscriptions can be re-used for running four virtual machines with SLES either in a virtualization environment or also within a cloud environment.

Ordering information

For the new pricing and packaging structure new order codes have been prepared.

Renewal of terminating subscriptions

The subscription offerings can be used to renew existing subscriptions which are close to their support cycle.

- Previous Basic subscriptions without Support Pack can only be renewed by subscriptions together with the appropriate Support Pack.
- Changing the support SLA from 5x9h to 7x24h or vice versa is possible.
- If a multi-socket subscription (4-socket or 8-socket) is to be renewed the number of subscriptions needed can be calculated by dividing the number of populated sockets by two.

Support term

All subscriptions and Support Packs are available with a support term of 1-year, 3-years and 5-years. In order to achieve a different support term like 2-years or 4-years the server hardware needs to be shipped initially with either a 1-year or 3-year term subscription. Close to the end of the initial term (1-year or 3-years) the subscription must then be renewed by a 1-year subscription to achieve the desired support term. Initially ordering two subscriptions and Support Packs to reach the desired support term is not possible.

Registration of the subscriptions and services

The keys required for registration in the SUSE Customer Center are supplied on the subscription documents. These documents also contain detailed information on how to register hardware in the SUSE Customer Center <http://scc.suse.com/login>.

Activation of Support Pack must be performed according to the information supplied by Fujitsu.
