Printing for Professionals

## Executive summary

The improved Router V3 for BS2000 environments becomes now general available.

It's predecessor, Router V2 for BS2000, will immediately reach the end-of-sales status.

The general availability is effective with end of February 2011.

PRISMAproduction Host (BS2000)

## **BS2000 Router V3 is now general available**

Thanks to extensive support of our Opco's we are now able to announce the general availability of the heavily improved Router V3 for BS2000. With this new version Router V3 we improve our support in the BS2000 mainframe area significantly. Furthermore this new version is a clear commitment for continued support of BS2000 customers in terms of production printing. The general availability is effective with end of February 2011.

## PRISMAproduction Host BS 2000 Router V3 – what’s new?

The Router module, which is the essential part of the connection between mainframe and server, offers with its new version important improvements. These new set of functionalities enables tremendous advantages in transferring data from BS2000 mainframe to our PRISMAproduction Server.

- Checks the whole Job to be transmitted of feasibility. That reduces the risk of transferring unprintable Job’s to the Sever significantly.
- Full support for multi resolution Job’s. Now also Job’s containing resources with different print resolutions could be handled by the Router.
- Full support of “PAM”- Files (BS2000 proprietary format). This widens the opportunities of our BS2000 Router solution significantly.
- For high performance printing the new Router V3 is available in a asranized version for the x86 platform.
- Several minor enhancements and bug-fixes to improve the overall stability and performance of the BS2000 Router solution.

## Order the new versions

With immediate effect this new version becomes general availability. Due to that only the new BS2000 Router V3 will be delivered from now on. The price and the MMC will remain at the same level. The list below shows the new order number for the Router V3 as well as the upgrade from the former Router V2. The upgrade from the Router V2 to the new version V3 is free of charge for customers with a valid maintenance contract. For more details please refer to the OMDs system and to the current price book.

Router (BS2000) V3	License	2100043674
Router (BS2000) Upgrade V2 to V3	License	2100043675

## Migration of existing customers

Existing customers with a valid service contract could easily been upgraded to this new version. The upgrade from the predecessor version to V3 is part of the Océ DDS price book and must be ordered.

The upgrade is free of charge and the MMC remains at the same level.

## Limitations

Please be aware that this new version of Router for BS2000 is only designed for customers using **only the router connection** between their BS2000 system and our PRISMAproduction Server system.

The Router V3 for BS2000 is not compatible with the BS2000 PRISMAproduction Host SPS module, which means both products could **not** be installed on the same mainframe. If there is any need for this rather strange configuration, please contact CS&SS well in advance to design a customer specific solution.

## Discontinuation of predecessor

With general availability of Router V3 for BS2000 the predecessor immediately receives the M8 (end of sales) status. The status M9 (end of support) is planned for February 2012.
