

Solution brief

Fujitsu ETERNUS storage and Veeam Backup & Replication™

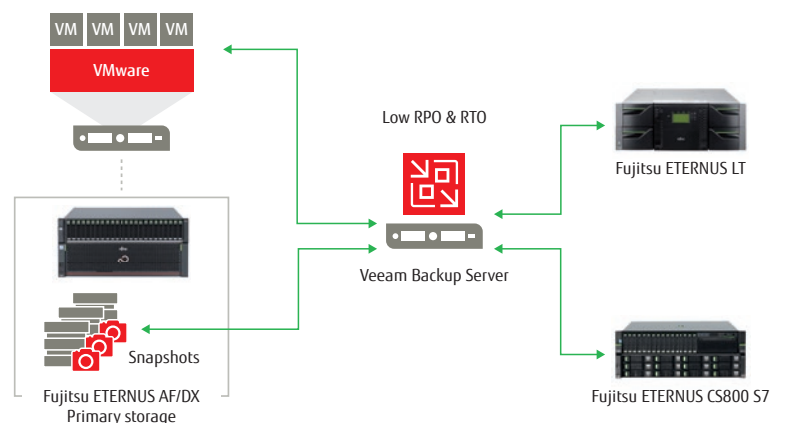

Business can be made or broken depending on the data availability strategy of the organizations. In the event of a disaster, data loss needs to be regulated to maintain business continuity. With the integration of Fujitsu ETERNUS and Veeam® software, you can reduce your downtime window and amount of data loss to ensure business continuity. The combination of Fujitsu ETERNUS and Veeam ensures efficient backup, recovery and orchestration that provides customers with agility, availability and business acceleration. Fujitsu ETERNUS delivers a comprehensive storage infrastructure while Veeam delivers the most complete backup and recovery solution for Fujitsu ETERNUS storage. Veeam Backup & Replication™ combined with Fujitsu ETERNUS storage hardware delivers a simplified data availability solution that meets modern service level objectives (SLAs) for the recovery of IT services, including data and applications.

Data Availability with Veeam and Fujitsu storage

Data availability starts with primary storage, so having a modern Tier-1 storage architecture that's designed for business-critical applications will increase availability and enable flexible optimization. The combination of ETERNUS primary storage ETERNUS AF/DX and Veeam Backup & Replication™ solutions accelerates the use of storage snapshots for recovery and backup. Veeam Availability solutions are perfectly suited for virtualized environments on Fujitsu ETERNUS which helps automate backups and virtual machine (VM) replicas from ETERNUS DX/AF snapshots as often as you wish. This ensures application availability and better recovery point objectives (RPOs), which also improves SLAs by providing the following:

- **Simplified backup:** Eliminating redundancies for seamless operations
- **High-Speed Recovery:** Rapid recovery of what you want, the way you want it
- **Data Loss Avoidance:** Low RPOs and streamlined disaster recovery (DR)
- **Verified Recoverability:** Guaranteed recovery of every file, application or virtual server, every time
- **Leveraged Data:** Low-risk deployment with a production-like test environment
- **Complete Visibility:** Proactive monitoring and alerting of issues before operational impact

Faster DR with Fujitsu data protection appliances and Veeam

Data backup and Availability are critical for business continuity and growth. Fujitsu ETERNUS CS data protection appliances combined with Veeam Hyper-Availability Platform™ consolidates and improves storage efficiencies and helps evolve the way you manage your data. The combination of ETERNUS CS800 data protection appliances with Veeam Backup & Replication™ offers features for building and maintaining a flexible backup infrastructure, performing data protection tasks (such as VM backup, replication and copying backup files) and managing virtual, physical and cloud-based workloads from a single console. Fujitsu ETERNUS CS800 S7 appliances are integrated with Veeam data mover services to deliver fast backups and restores, without impacting data compression and deduplication.

With this combined solution, you can:

- Maintain low RTOs and minimize disruption
- Enable fast backups and restores
- Minimize downtime of crucial production VMs
- Reduce the impact of backups on your server and network
- **And more!**

Long-term data protection with ETERNUS LT and Veeam

Fujitsu's ETERNUS LT tape systems are scalable from small to high capacity, and storage requirements are certified Veeam-ready. Veeam makes it easy to migrate backups and replicas off site. The integration of ETERNUS LT with Veeam Backup and Replication delivers efficient tape archival for VM backups and ensures streamlined data management for long-term data retention.

With this combined solution, you can:

- Restore VMs directly from tape to the primary VM environment, which saves time and reduces intermediary storage
- Protect against ransomware and cyber threats through air-gap functionality
- Manage data long-term data for compliance regulations and efficient recovery
- **And more!**

→ Fujitsu and Veeam allow you to simplify operations and ensure data availability. Implement the most simplified virtual data protection with Veeam and Fujitsu ETERNUS storage solutions today!
