FUJITSU

Transform your SAP experience, the cost-effective way

Fujitsu uSCALE for SAP

For organizations currently operating with a standard SAP ERP system, the migration to SAP S/4HANA is an imminent next step. More than merely an upgrade, transitioning to SAP S/4HANA signifies a technology shift to a system that meets the growing demands brought on by Big Data and digital transformation. As-a-service models can provide the key to a successful transition.
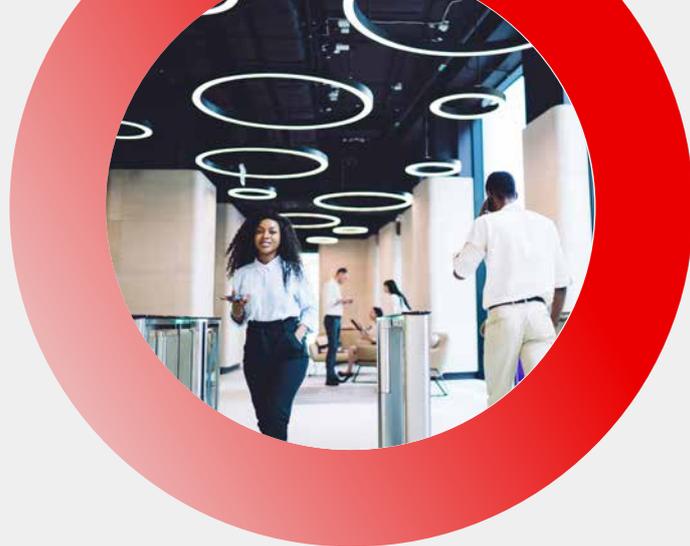

Migrating to SAP S/4HANA offers strategic advantages that increase organizations' agility and innovative power. This transition grants businesses access to fully integrated, real-time data, providing an encompassing perspective of operations spanning upstream and downstream supply chains. As the ERP's first truly cloud-native version, S/4HANA enables seamless connectivity and integration. Moreover, SAP S/4HANA's advanced analytics and machine learning amplify decision-making and innovation.

While managing workloads in hybrid environments can be intricate, early migration allows businesses to optimize SAP implementations. Adopting as-a-service models modernizes infrastructure, aligning with evolving demands, streamlining technology integration, boosting agility, and cutting costs.

Fujitsu uSCALE for SAP

With a comprehensive suite of tools and services and a strong partner ecosystem, Fujitsu helps businesses navigate the transition to SAP S/4HANA successfully. Combined with our consumption-based uSCALE as-a-Service model, services like SystemInspection for SAP Solutions, BestPlace, and Flexframe for SAP ensure your smooth and cost-efficient SAP journey, every step of the way.

Your SAP transition journey with Fujitsu

No matter your stage in the transformation process, Fujitsu assists in broadening your enterprise and ensuring successful migration. We offer consumption-based as-a-Service solutions designed to achieve objectives without initial investments.

SystemInspection Services for SAP Solutions

Data-driven support for migrations or hardware updates, going beyond standard SAP tools by utilizing actual data from your setup.

Fujitsu BestPlace for SAP

AI-based cloud advisory tool that efficiently pinpoints optimal placements for any SAP workload, whatever your sector or company scale.

Fujitsu PRIMEFLEX for SAP HANA

Pre-tested, 100% SAP-certified solution tailored for the SAP HANA architecture. It maximizes persistent memory capabilities risk-free and offers simplified operations with a single service partner, available as-a-service through Fujitsu uSCALE.

Fujitsu uSCALE: Flexible & Transparent

Adaptable on-premises IT infrastructure solution, billed monthly based on actual usage. uSCALE bolsters business resilience and flexibility, eliminating initial costs. Specifically adapted for SAP cloud projects.

Access to global business ecosystems with Equinix

Fujitsu has teamed up with Equinix to provide a comprehensive hybrid cloud connectivity solution that facilitates the optimal hybrid strategy to drive SAP-centric digital transformations.

Benefits
